# AI Infrastructure Leverage Monitor

**Issue 8**

Kilambi Research

1 November 2026

*Standing weekly series. Vintage 2026-11-01.*
*All figures in USD millions unless stated.*

## Abstract

Quarterly reporting season did in one week what the prior seven issues did in sequence: it re-measured three hyperscalers at once. Primary committed credit rises to $4,882,032.2 million (Reconstructed B), up $333,227.2 million (7.33%) against the Issue 7 dataset as amended on Oct 26 (see the base reconciliation in Section 1). Composition matters more than the total. Amazon's long-term debt reached $173,125 million at Sep 30, 2026, up 163.7% from Dec 31, 2025 (10-Q filed Oct 30; Observed A), and Alphabet's reached $125,102 million, up 168.8% on the same comparison (10-Q filed Oct 29; Observed A): headline debt itself is now the growth line. Uncommenced leases rose at all three filers, to $364.6 billion at Microsoft, $130.5 billion at Alphabet and $164.9 billion at Amazon. Alphabet disclosed $31.9 billion of funding and support commitments to unconsolidated VIEs, against $1.1 billion at year end 2025, including $10.0 billion of backstops behind Crux AI, its joint venture with Blackstone; the amount is a memo row in this dataset, because it likely sits inside the carried $707.0 billion commitment aggregate and a primary row would risk double counting. Meta funded the other way: it priced $37.5 billion of permanent and hybrid capital ($25.0 billion of forward equity and $12.5 billion of 6.50% mandatory convertible preferred) rather than debt (424B5 filings, Oct 28; Observed A). Microsoft priced $25.0 billion of senior notes on Oct 29, its first US investment grade offering since 2017, settling Nov 4. The repricing entered a third week: two more CoreWeave senior lines crossed to more than 15 points below their fund marks on final prints, while the census of such prints narrowed from 25 entries to 22 over the week. No credit event was reported for any named credit. The standing verdict holds, with a change of emphasis: economic leverage still exceeds headline debt, and this quarter headline debt stopped standing still.

# 1 What changed since the last issue

*Base reconciliation.* Issue 7 was published with primary committed of $4,508,805.0 million over 74 current primary rows. On Oct 26, 2026, after that issue closed, the vintage was amended on the program owner's instruction to record the SpaceX master finance lease from its 8-K (obligation OBL-0126, $40,000 million, primary), which lifted the dataset to $4,548,805.0 million over 75 primary rows. Every delta in this issue is computed against the amended base. Against the published Issue 7 headline, the increase is $373,227.2 million (8.28%).

Of the $333,227.2 million increase against the amended base, $159,640.0 million (47.9%) is one coverage addition: Amazon's property and equipment commitments, a line its commitments table has carried in prior periods and this monitor extracts for the first time (Reconstructed B). A further $148,587.2 million (44.6%) is re-measurement of commitment and debt stocks the dataset already carried, at Amazon, Alphabet, Microsoft and Digital Realty. Genuinely new signed borrowing in the window is $25,000.0 million (7.5%): the Microsoft notes. No new SPV financing closed.

Three quarterly reports drive the re-measurement. Alphabet (10-Q for the quarter ended Sep 30, 2026, filed Oct 29, accession 0001652044-26-000084; Observed A) reports long-term debt of $125,102 million after issuing $45.0 billion of US dollar notes and $35.8 billion of foreign currency notes during 2026, recorded lease liabilities of $20,508 million operating and $3,705 million finance, and uncommenced leases of $130.5 billion. Its VIE disclosure is the week's most consequential single paragraph: future funding and financial support commitments to unconsolidated VIEs of $31.9 billion, against $1.1 billion at Dec 31, 2025, including $20.0 billion of milestone-contingent capital funding with a private company and $10.0 billion of data center and energy backstops behind Crux AI, the May 2026 joint venture with Blackstone (Blackstone committed to capital contributions of up to $5.0 billion; Alphabet's revenue backlog includes $16.8 billion under a multi-year agreement with Crux AI). Microsoft (10-Q filed Oct 28, accession 0001193125-26-436133; Observed A) reports total debt of $35,481 million, lease liabilities of $27,477 million operating and $70,973 million finance, and uncommenced leases of $364.6 billion, the largest such portfolio in the dataset, ahead of Meta's $355.7 billion. Amazon (10-Q filed Oct 30, accession 0001018724-26-000040; Observed A) reports long-term debt of $173,125 million, uncommenced leases of $164,922 million, unconditional purchase obligations of $94,759 million (down 27.1% in the quarter) and property and equipment commitments of $159,640 million. Digital Realty (10-Q filed Oct 30, accession 0001104659-26-120710; Reconstructed B) sums to $19,494.6 million of debt across its four balance-sheet lines, against $18,635.3 million at Q2, with the increase carried by revolver draws and secured debt while senior notes declined. Equinix filed its 10-Q on Oct 28 (accession 0001101239-26-000180): senior notes less current portion of $20,963 million, against $16,910 million at Dec 31, 2025, on $5,399 million of nine-month note proceeds. The extraction is long-term-only, so under the Meta precedent of Issue 7 no Equinix row is superseded this vintage; the filing is a source row and the aggregate carries.

Meta's financing is recorded at priced terms, with two corrections consolidated from the daily record. First, the $125 billion package framing carried in the Oct 27 daily memo is withdrawn:

the Form FWP (accession 0001193125-26-432549) is a pricing term sheet for two equity offerings, and the Hyperion placement, senior notes and bridge in that framing are pre-existing items already in this dataset. Second, the priced record is: 40,000,000 Class A shares at $625.00 ($25.0 billion gross) under forward sale agreements with Morgan Stanley Capital Services LLC and Goldman Sachs & Co. LLC, settlement at Meta's discretion on or before Nov 19, 2027, with cornerstone indications from NVIDIA, Advanced Micro Devices and Broadcom of up to $5.0 billion in aggregate, not binding; and 250,000,000 Series A depositary shares at $50.00 ($12.5 billion gross) on 6.50% mandatory convertible preferred stock, closed Oct 29, 2026 (final supplements filed Oct 28, accessions 0001193125-26-436410 and 0001193125-26-436405; closing 8-K accession 0001193125-26-438017; Observed A). Both legs enter as memo rows: unsettled equity and preferred equity are not debt under the dataset's counting rules, and the exclusion is recorded so it can be audited.

The lender-side correction is of the same kind. The Oct 27 daily memo's account of an Ares Capital acquisition of Blue Owl Capital Corp is withdrawn in full: it appears in no filing read. The filed transaction (8-K filed Oct 27, accession 0001104659-26-118958; Observed A, as corrected) is Ares Capital's acquisition of MidCap Financial Investment Corporation at an enterprise value of about $2.6 billion, for $10.88 per fully diluted share (about $1.21 in cash from the Ares adviser plus about $9.67 in Ares stock), closing expected in the first half of 2027, with no AI infrastructure obligor named. Ares's corrected third-quarter figures are net asset value of $19.31 per share and a portfolio at fair value of $29,213 million. The Oct 28 Form 425 transcript (accession 0001104659-26-119290) adds a $750 million upsized commitment to the Wells Fargo-led funding facility. No obligation row arises: a BDC merger is a lender consolidation event, and the monitor records it as a source.

Galaxy Digital's third-quarter 8-K (filed Oct 27, accession 0001859392-26-000108; Observed A) confirms the Helios structure in operation: Data Centers adjusted gross profit of $79 million and adjusted EBITDA of $69 million in the first full quarter of revenue under the Helios I Phase I lease (133 MW delivered to CoreWeave), and Helios I Phase II fully financed and under construction, with deliveries from the second quarter of 2027. The $3.5 billion notes completion the release lists is the Phase II issue already in the registry baseline, not a new issue, and no new drawn amount is stated for the Phase I term loan.

One government action falls under the standing PROJECT ACTION rule. On Oct 27, 2026 the Dona Ana County Board of County Commissioners voted 5 to 0 to authorize county management and counsel to notify the Project Jupiter entities of a potential breach of the industrial revenue bond agreements, on the reading that the community benefits agreement requires on-site generation through the microgrid with no utility connection (reported Oct 28 by Organ Mountain News; Estimated C, a secondary report of a public vote). The vote establishes no breach, revokes no part of the $165 billion authorization and terminates no lease. It is recorded as a project risk event, not a financing event, and no obligation row arises.

The registry re-check produced the usual week's worth of nulls and two classes of addition. Additions: one Compass CUSIP (20469BAL1, CMPLLC, 6.3% due Jul 25, 2056, Rule 144A) from the Oct 28 issuer sweep, and the ten Microsoft series (CUSIPs 594918CX0 to 594918DG6) from the Oct 31 sweep, which puts the priced notes into the registry ahead of their Nov 4 settlement. Holder

reports concentrated in the week: registered funds filed August-period reports naming Beignet, Sopaipilla and Galaxy Helios positions at scale (daily full-text counts of 43 to 100 hits per term at the Oct 28 to 30 concentration). They name no new counterparty, facility or project term and are a registry delta only. GLEIF records showed no update all week (the most recent remains Digital Realty Trust, Inc., Oct 22) and the searches for entities without LEIs returned no records, as at baseline. No new N-PORT or Form D bulk release posted: the 2026q4 N-PORT zip returns HTTP 404, verified daily and again by the weekly price chain on Nov 1, so fund marks stay at report period Jul 31, 2026 and the marks leg produced no MOVE or LOW flags. The EIA-860M September 2026 file remains the latest release (next release Nov 24). The Franklin County recorder script failed on truncated portal fetches on every attempt this week, as it has since Oct 15; its watermark was not advanced and its last completed result matches baseline. The FINRA aggregate pull failed on Nov 1 on a token exchange error (HTTP 400); the aggregates stand through Oct 30, a Friday, so no trading session is missing. Paper-relevant items are price records only: the CoreWeave senior CUSIPs that crossed this week sit in the KR-WP-2026-27 forensic inventory universe, and no figure published in that paper changes.

The bond price watch therefore ran on its TRACE leg alone, and Section 6 reports it. The identity pass worked eight families, the full weekly cap, all at step (ii) of its order: no crosswalk record carried candidate status, and a scan of the bond registry found 11 issuer strings that no record's registry names covered. Eight of the eleven belong to families already proven on Oct 15, 2026, and the pass completed their registry name linkage: Advanced Micro Devices (ADVANCED MICRO DEVICES INC, 9 registry CUSIPs), Intel (INTEL CORP, 43), Micron (MICRON TECHNOLOGY INC, 19), Applied Materials (APPLIED MATLS INC, 9), Lam Research (LAM RESH CORP, 5), KLA (KLA CORP, 8), GE Vernova (GE VERNOVA INC, 3) and TSMC (TSMC GLOBAL LTD, 12). Coverage is now 106 of 109 issuer strings. Eaton, IREN and SpaceX remain for next week. No family was newly proven, none was closed as not found, and the pass recorded no bonds that the registry lacks.

The monthly collateral and ratings pass ran with this issue (the first run of November). No rating action, downgrade, outlook change or coverage breach was found for any of the nine ABS issuer families in free sources. Two ratings stand as recorded at issuance from secondary reporting: Beignet at A+ (S&P) and Sopaipilla at A+ and AA-. The pass also corrects a label in collateral.json: the Sopaipilla vehicle is Meta's El Paso campus (BlackRock 80 percent, Meta 20 percent) on the secondary record, not a Google vehicle as the file's seed label said; the deal terms in the file are unchanged and no figure depends on the label. No public trustee debt service coverage figure was located for any family. The same pass refreshed the Treasury history archive through Oct 29, 2026 (FRED series DGS2, DGS5, DGS10, DGS30 from Jan 1, 2015; last observations 4.61, 4.78, 4.98 and 5.32 percent).

The BLM pre-financing tier produced no tripwire event. The weekly EDGAR leg (scripts/blm_edgar_watch.py, run Nov 1) queried all 19 watchlist names: zero registrant hits and one transport failure (the Townsite Solar 2 entity search; its full-text leg completed). Filing mentions stand at 328 across 9 names, all in other filers' routine documents, none dated in this week's window and none recording a fi-

nancing for a BLM case. No name is promoted. The annex at Section 9 is regenerated as of Nov 1, 2026.

## 2 Borrowers

The quarter's arithmetic is now visible in the tier ladder (Figure 1). Alphabet's Tier A debt rose from $100.2 billion to $125.1 billion in one quarter, and its Tier D measure (debt plus all lease liabilities plus uncommenced leases) rose from $206.0 billion to $279.8 billion (Reconstructed B). Microsoft's Tier D rose from $457.9 billion to $498.5 billion on the strength of uncommenced leases alone; its balance-sheet debt fell 11.9% in the quarter, to $35,481 million, and then the company priced $25.0 billion of notes four weeks after the balance-sheet date, which puts its debt on a pro forma basis at $60,481 million (Reconstructed B: the Sep 30 aggregate plus the priced issue that settles Nov 4). Amazon's ladder cannot be recomputed this issue, because its Q3 lease extraction is not like-for-like with the Q2 split; its Tier A line is the fact that matters this week in any case. At $173,125 million, Amazon's long-term debt is 2.64 times its Dec 31, 2025 level, and Alphabet's is 2.69 times (Reconstructed B from Observed A filings). Headline debt, which the first seven issues treated as the slow-moving part of the structure, grew by $80.8 billion of Alphabet issuance and a comparable Amazon program inside 2026. The monitor's question was whether headline debt understates true commitments. It still does, by the commitment figures in Figure 2. The understatement is now shrinking from the debt side, not growing from the commitment side alone.

Figure 2 is refreshed for the Microsoft and Amazon bars. Microsoft's uncommenced leases ($364.6 billion) are now the largest single uncommenced portfolio in the figure, ahead of Meta's $355.7 billion. Amazon enters the figure twice on Q3 readings: uncommenced leases of $164.9 billion and property and equipment commitments of $159.6 billion. Alphabet's $707.0 billion fixed and guaranteed commitment aggregate carries on its Q2 basis; the Q3 VIE disclosure ($31.9 billion) is recorded as a memo row against it rather than added to it, pending a line by line reconciliation of the two disclosures. That treatment is conservative in the direction of understatement, and it is stated here rather than buried: if none of the VIE balance sat inside the $707.0 billion, the dataset's primary total would be $31.9 billion higher.

Two items from earlier issues receive their first full discussion here. The SpaceX master finance lease ($40,000 million, commitment letter dated Oct 24, 2026; 8-K filed Oct 26, accession 0001104659-26-118614; Observed A) entered the dataset by amendment after Issue 7 closed and is part of this issue's base. Its terms, as filed: an Apollo-managed lessor acquires GPU pods and related equipment for SpaceX data centers, delivered in tranches under lease schedules of about 5 to 5.25 years, rent quarterly in advance at one twentieth of financed cost plus a fixed rate to be set at pricing, aggregate principal payments of about $40 billion, closing expected before year end 2026 and commencement in the first half of 2027. The press structure reported before the filing (about $10 billion of bank loans plus about $30 billion of investment grade bonds, at indicative yields of about 7.75 and 8.3 percent) is superseded and unconfirmed, and the dataset records it as such. The structure is the checklist's circular pattern in filed form: equipment finance whose collateral value

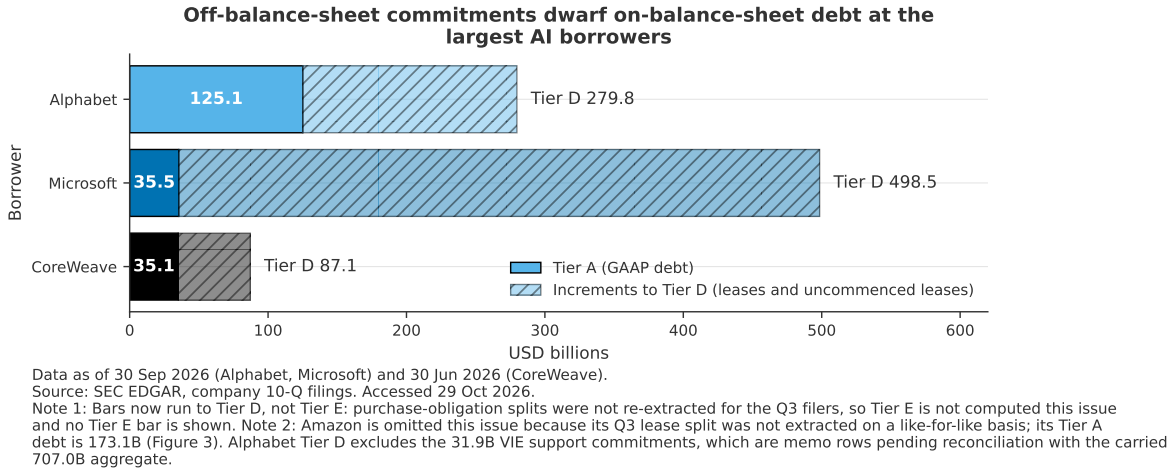

**Figure 1:** Off-balance-sheet commitments dwarf on-balance-sheet debt at the largest AI borrowers. Refreshed for Issue 8 to Tier D: Alphabet and Microsoft are the Q3 2026 readings (Sep 30, 2026); CoreWeave carried at Jun 30, 2026. Tier E is not computed this issue (purchase splits not re-extracted); Amazon is omitted, for the reason stated on the figure.

rests on GPU pods, priced at a rate the commitment letter leaves open.

Alphabet's Crux AI disclosure is the second. A hyperscaler has formed a joint venture with a private capital sponsor to supply compute as a service, committed up to $10.0 billion of backstops behind the venture's own data center and energy agreements, and booked $16.8 billion of its own revenue backlog with the venture. Each leg is disclosed. The combined position (sponsor capital of up to $5.0 billion from Blackstone, Alphabet backstops of up to $10.0 billion, Alphabet as the venture's anchor customer) is a risk-sharing structure in which the hyperscaler's exposure sits in support commitments and backlog rather than in debt or leases. That is the category this program's tier (e) exists to measure, and it is the fastest-growing line in this week's filings: the VIE support total rose by $30.8 billion in nine months (Observed A).

## 3 Lenders

Lender regulatory metrics are unchanged: thirteen lenders, CET1 ratios as of June 2026 reporting periods, all well above minimums (Figure 4). The Q3 refresh against bank 10-Q filings is deferred for a third consecutive issue and is stated as such: the filings carrying HTM, deposit mix and commitment detail have not been processed into the dashboard basis. The market gauges are treated in Section 5. No bank cut or suspended a buyback or dividend in the window (falsifier item checked, not triggered).

The week's lender-side events are three, and none is a bank balance-sheet event. Microsoft's $25.0 billion pricing was joint book-run by J.P. Morgan, UBS and Wells Fargo among others, at Aaa and AAA ratings with stable outlooks: the highest-grade hyperscaler credit returned to the US market after nine years and was absorbed at coupons of 4.850 to 6.350 percent across two to forty

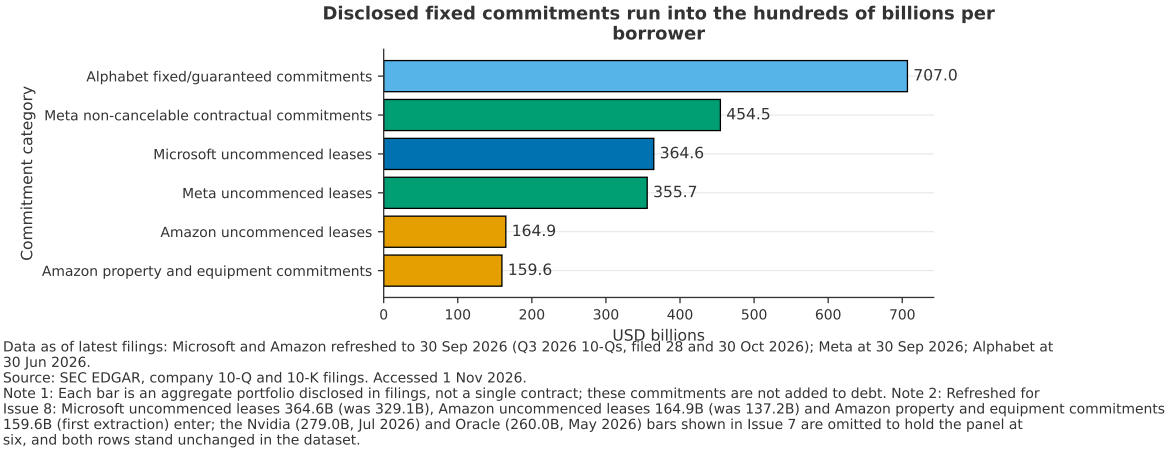

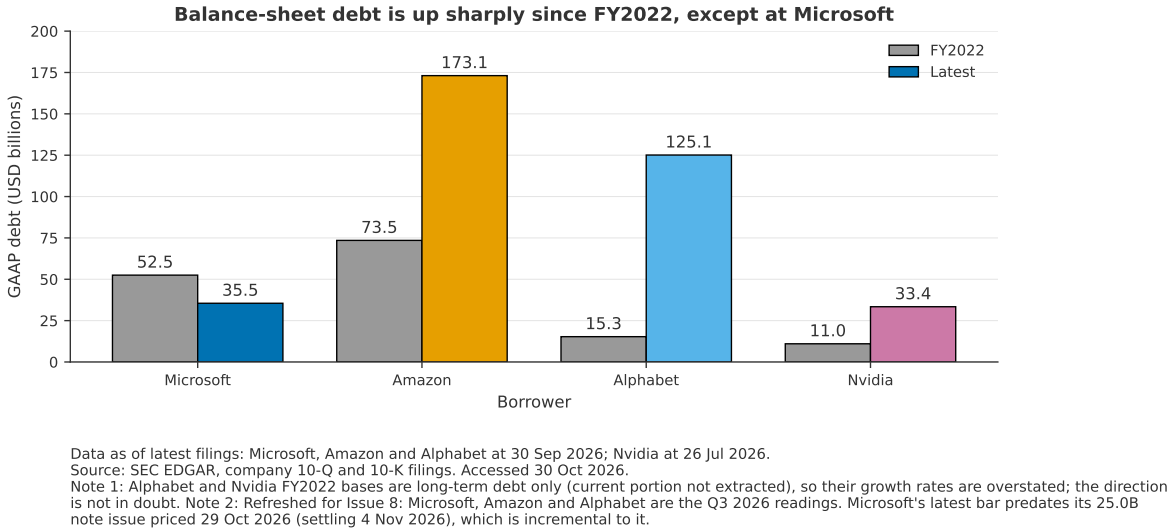

**Figure 2:** Disclosed fixed commitments run into the hundreds of billions per borrower. Refreshed for Issue 8: the Microsoft and Amazon bars are the Q3 2026 readings; Meta bars at Sep 30, 2026; the Alphabet bar carried at Jun 30, 2026.

years. Meta's forward purchasers are Morgan Stanley Capital Services LLC and Goldman Sachs & Co. LLC, and its cornerstone indications came from three of its own suppliers and customers (NVIDIA, Advanced Micro Devices, Broadcom, up to $5.0 billion in aggregate, not binding): the circular financing map gains a filed example at the equity layer. Ares Capital's acquisition of MidCap Financial consolidates two watched BDC lenders, with a $750 million upsized Wells Fargo-led funding facility recorded in the Oct 28 transcript; no AI infrastructure obligor is named in the merger documents, so the monitor records the consolidation without an exposure figure.

Read against the checklist, the absorption pattern of the prior two issues has rotated again. Issue 6 recorded a sold leveraged loan at 95 cents (Volta); Issue 7 recorded two bank facilities held on bank terms (Nebius, TeraWulf). This week the marginal funding was a benchmark bond issue at the top of the quality stack and a priced equity package at a hyperscaler: the market funded the strongest names in size, in public markets, at both the debt and the equity layer, in the same week that it kept marking the neocloud complex down (Section 6). Selectivity, not capacity, is the week's lender fact.

## 4 Maturity wall

The wall grows by eight rows, all from one issue: the Microsoft notes add $3,000 million due 2028, $4,250 million due 2029, $3,250 million due 2031, $2,500 million due 2033, $4,000 million due 2036, $2,000 million due 2046, $4,000 million due 2056 and $2,000 million due 2066 (Observed A, pricing term sheet). The post-2030 concentration rises accordingly: Microsoft's post-2030 principal in the summary figure moves from $34.4 billion to $46.4 billion (Figure 5). No other borrower filed a dated maturity in the window. Meta's forward equity settles on or before Nov 19, 2027 and its mandatory converts convert in August 2029; neither is a principal maturity and neither enters the wall. The wall remains a floor, for the reason stated in Issue 7: the commitment portfolios in Figure 2 carry

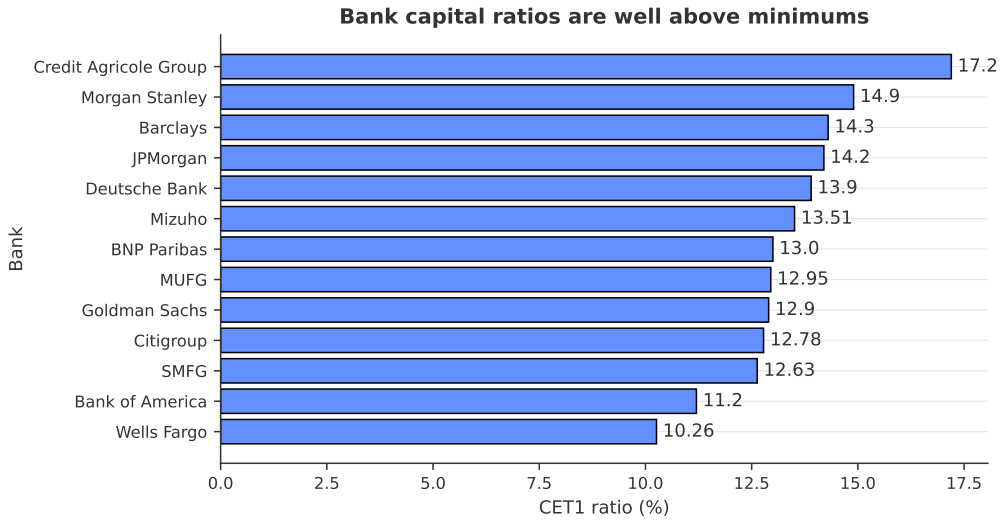

Data as of latest filings: Microsoft, Amazon and Alphabet at 30 Sep 2026; Nvidia at 26 Jul 2026.
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 30 Oct 2026.
Note 1: Alphabet and Nvidia FY2022 bases are long-term debt only (current portion not extracted), so their growth rates are overstated; the direction is not in doubt. Note 2: Refreshed for Issue 8: Microsoft, Amazon and Alphabet are the Q3 2026 readings. Microsoft's latest bar predates its 25.0B note issue priced 29 Oct 2026 (settling 4 Nov 2026), which is incremental to it.

**Figure 3:** Balance-sheet debt is up sharply since FY2022, except at Microsoft. Refreshed for Issue 8: Microsoft, Amazon and Alphabet are the Q3 2026 readings; Nvidia carried at Jul 26, 2026. The Microsoft bar predates its Oct 29 note pricing.

no dated schedule in the filings, and this week's additions to those portfolios ($108.5 billion of new uncommenced lease readings across the three filers, Reconstructed B) add nothing to the wall at all.

## 5 Funding-stress gauges

The monthly FRED pass ran with this issue, and gauge 1 is refreshed (Figure 6). The US 10-year Treasury yield closed at 4.98 percent on Oct 29, 2026 (FRED series DGS10, last observation Oct 29; Observed A), down from 5.09 percent on Oct 16, and the 90-day change slowed to +30 basis points (against 4.68 percent on Jul 30), one third of the +100 basis point warning level. The remaining eleven gauges carry at their Issue 7 basis: the KBE drawdown and the AT1 benchmark at their October readings, NDFI lending at September, and the eight regulatory gauges at Q2 2026, with the deferral stated in Section 3. No gauge sits at historical stressed levels. Two gauges sit at warning, both structural to their banks and unchanged: Citi's maximum uninsured-deposit share of 82.5 percent (warn 70 percent) and State Street's minimum disclosed LCR of 107 percent (warn 110 percent). Per checklist G, a calm funding dashboard is not read as an all-clear for buildout solvency: the stress in this dataset remains in borrower and project credit prices, which these gauges would register only downstream, and the week's rate move was in the easing direction in any case.

Data as of June 2026 reporting periods.
Source: company regulatory filings and earnings releases. Accessed 27 Sep 2026.
Note 1: Only SMFG discloses a quantified AI-related exposure (JPY 4.0tn); all other banks disclose none. Note 2: Carried unchanged into Issue 8 (vintage 1 Nov 2026): no new source data for this figure in the window.

**Figure 4:** Bank capital ratios are well above minimums. Carried unchanged from Issue 7.

## 6 The repricing, week three: the crossings reach final prints

Issue 6 recorded the Oct 16 repricing and Issue 7 its extension. This week the pattern changed in kind rather than in scale: the crossings that Issues 6 and 7 recorded on intraday prints were confirmed on session-final prints, on two further senior lines (Figure 7). On the Oct 29 session the CoreWeave Reg S notes (U2069EAB6) crossed on final prints, closing at 84.0, 15.28 points below the Apr 30, 2026 fund mark of 99.2848, and the CoreWeave 9.00% notes due 2031 (21873SAC2) fired intraday at 83.25 with a final print of 84.0, 14.84 points below its mark. On the Oct 30 session 21873SAC2 closed at 81.7598, 17.08 points below the mark, which is the final-print crossing of the same alert, and the CoreWeave 9.25% notes due 2030 (21873SAB4) closed at 85.2035, 15.45 points below the Jun 30, 2026 mark of 100.65, after the Oct 29 print had sat 13.53 points below: the bond exited the band and crossed again, which is a new alert under the program's rules. The week's TRACE flags on final prints were the CoreWeave 1.75% converts due 2031 (21873SAD0, 84.1027 to 77.1685 on Oct 29), the CoreWeave 9.75% 144A line (U2069EAC4, 86.75 to 81.59 on Oct 30, the one new flag of that session), and four moves already published on Oct 30 from intraday prints (21873SAL2, 038169AB4, 88080TAB0, 88080TAC8). The TeraWulf 1% converts (88080TAC8) also met the Tier-1 reference-drop test on final prints at 117.3475, 10.19 points below the reference. The census of prints more than 15 points below their latest fund marks narrowed over the week, from 25 entries (19 daily-watched) at the Oct 26 run to 22 (19) at the Oct 30 tape end, with an intraweek low of 19 (16) on Oct 29: the broad tape recovered ground that the CoreWeave senior complex did not.

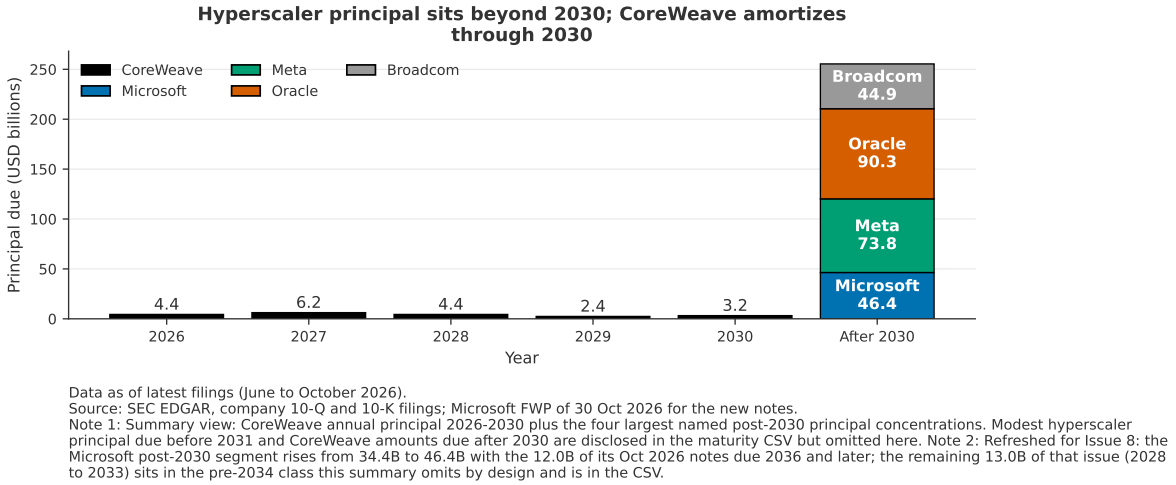

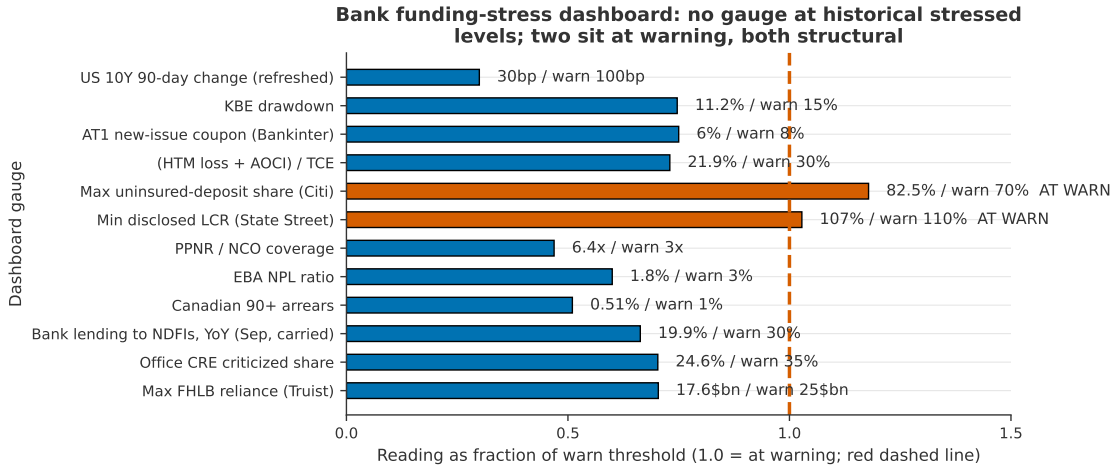

**Figure 5:** Hyperscaler principal sits beyond 2030; CoreWeave amortizes through 2030. Refreshed for Issue 8: the Microsoft post-2030 segment includes the Oct 2026 notes due 2036 and later.

Three readings, in the checklist's order. First, the price signal has moved down the capital structure and then confirmed itself: Issue 6's crossing was a convertible, Issue 7's was a senior note on an intraday print, and this week's are senior notes on final prints, with one line (21873SAB4) crossing, recovering inside the band, and crossing again. Second, the escalation marker, SPV repricing spreading to public hyperscaler bonds, remains unconfirmed in its strong form: the week's hyperscaler bond event was a $25.0 billion Microsoft issue absorbed at Aaa and AAA, and the census narrowed even as the CoreWeave lines crossed, which is concentration, not contagion, on this week's evidence. Third, no credit event was reported for any named credit in the window: no missed payment, acceleration, restructuring or project cancellation appears in the week's filings or memos. The language stays at repricing.

The fund marks behind the crossing test carry the same caveat as last issue. They are N-PORT report-period values (Apr 30, Jun 30 and Jul 31, 2026), because the 2026q4 bulk file has not been published. The crossing measures the distance between October trade prices and spring and summer fund marks; when the next bulk quarter lands, the marks leg re-bases and some crossings will close mechanically. The reference-drop leg, which needs no fund mark, fired independently on the same complex. Both legs are reported; neither is hidden inside the other.

## 7 Rotating focus: permanent capital enters the stack

This issue's rotating focus is the Meta package, because it is the week's clearest evidence on how the buildout's funding mix is changing. Meta is the monitor's largest commitment holder ($454.52 billion of non-cancelable commitments and $355.73 billion of uncommenced leases at Sep 30, 2026, per Issue 7). Faced with that commitment stock, the company did not issue debt, did not place project bonds through a vehicle, and did not sign a bridge. It sold equity forward ($25.0 billion, at $625.00 per share, settlement at its discretion by Nov 19, 2027) and issued mandatory convertible

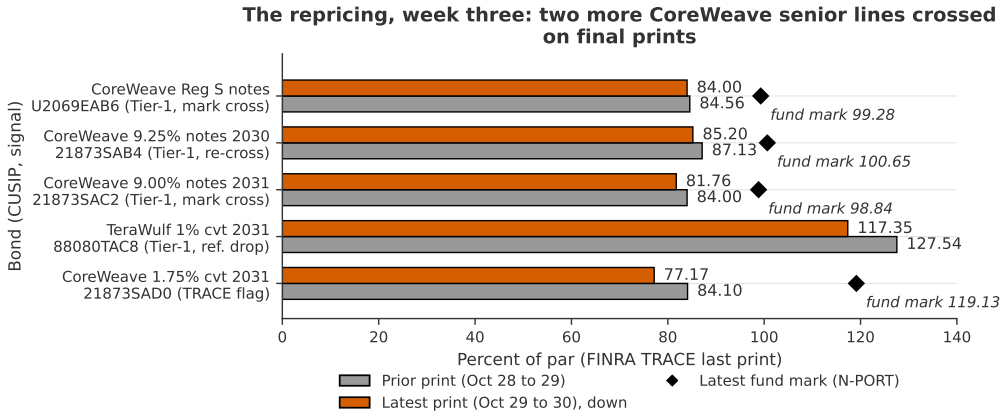

Data as of 1 Nov 2026: gauge 1 refreshed in the monthly FRED pass (DGS10 last observation 29 Oct 2026 at 4.98 percent; 90-day change +30bp against 30 Jul 2026 at 4.68 percent); gauges 2 and 3 carried at 16 Oct closes and benchmark; NDFI carried at Sep 2026; regulatory gauges carried at Q2 2026.
Sources: FRED (Federal Reserve Bank of St. Louis), series DGS10, retrieved 1 Nov 2026 via freddl; Finnhub (KBE); Bankinter press release (AT1 benchmark); Fed H.8 (NDFI); KR-WP-2026-12 (regulatory gauges).
Note 1: Ratios computed as value/warn (higher is worse) or warn/value (lower is worse); direct labels show the underlying numbers. The two gauges at warning are structural to their banks (Citi uninsured-deposit mix; State Street custody balance sheet), not new stress. Note 2: The 10Y level eased from 5.09 percent (16 Oct) to 4.98 percent (29 Oct) and the 90-day change slowed from +54bp to +30bp; the funding-stress sequence still starts with rates, and the week's direction was down.

**Figure 6:** Bank funding-stress dashboard: gauge 1 refreshed to Oct 29, 2026 in the monthly FRED pass (10Y at 4.98 percent, 90-day change +30bp); eleven gauges carried from Issue 7 at the bases stated on the figure. No gauge at historical stressed levels; two sit at warning, both structural.

preferred stock ($12.5 billion at 6.50%, converting in August 2029). The checklist records the pattern in advance (checklist B): equity pivots are negative leverage signals, because permanent capital does not compete for credit capacity, does not mature, and does not carry covenants. Alphabet's $84.75 billion June 2026 equity raise and Oracle's $45 to 50 billion plan (half equity) are the standing examples; Meta's $37.5 billion is the third, and the first by the program's largest commitment holder.

Set against the same week's debt figures, the pivot reads as one leg of a rotation rather than a retreat. Amazon and Alphabet issued debt at a pace that doubled their balance-sheet lines in nine months; Microsoft returned to the bond market after nine years; Meta raised equity. All four fund the same commitment growth (uncommenced leases rose by $108.5 billion across the three Q3 filers that report them, Reconstructed B). The funding question the monitor tracks is therefore splitting by name: borrowers with the strongest equity currencies are substituting permanent capital for debt at the margin, while borrowers issuing debt are doing so at investment grade coupons that the market absorbed without concession stress this week. The stress remains where it has been for three weeks, in the junior, single-tenant and convertible complex priced in Section 6, whose issuers have neither Meta's equity currency nor Microsoft's rating.

Two cautions close the focus. The forward sale is unsettled: Meta has received no proceeds, and the $25.0 billion enters its capital only on settlement by Nov 2027, so the package's deleveraging effect is a 2027 event, not a Q3 fact. The mandatory converts are debt-like in one respect the

Data as of 30 Oct 2026 (FINRA TRACE prints; Grade A). Fund marks are SEC N-PORT report periods 30 Apr, 30 Jun and 31 Jul 2026.
Sources: monitor TRACE store (trace_trades.duckdb); daily filings pull memos, 27 to 31 Oct 2026.
Note 1: Prices are percent of par. Latest prints are session-final prints for 29 Oct (21873SAD0, U2069EAB6) and 30 Oct (21873SAC2, 21873SAB4, 88080TAC8). Note 2: The two convertibles are equity-linked instruments; their moves partly track the underlying shares. The 21873SAB4, 21873SAC2 and U2069EAB6 crossings are on senior notes.

**Figure 7:** The October 26 to 30 repricing: prior print against latest print for the five CUSIPs that produced Tier-1 alerts or TRACE flags on final prints in the window, with latest fund marks where the N-PORT panel carries them.

equity label hides: the 6.50% dividend is a fixed cash charge of about $812 million a year on the preferred (Reconstructed B: 6.50% of $12.5 billion) until conversion in August 2029. The dataset records both legs as memo rows for exactly this reason: excluded from the debt aggregates, visible in the record, and available to any reader who wants to count them differently.

## 8 What we do not know

The monitor's unknowns are stated plainly. Amazon's and Equinix's Q3 lease splits were not extracted on a like-for-like basis, so their lease rows carry and their tier ladders are not recomputed this issue; Microsoft's and Alphabet's purchase obligation splits were not re-extracted, so Tier E is not computed for any Q3 filer. Alphabet's VIE commitments are recorded as a memo row because their overlap with the carried $707.0 billion aggregate is not reconciled; the dataset's primary total is understated by up to $31.9 billion on that item alone. The Oracle Investor Day exhibit furnished with its Oct 28 8-K (accession 0001193125-26-435853) was not fetched in the daily pass and its guidance content is unassessed. Bank Q3 regulatory detail (HTM and AOCI, deposit mix, LCR, NDFI lending) has not been processed into the dashboard basis for a third consecutive issue. The Yucca loan's current status remains unknown: the stated maturity passed on Sep 18, 2026, the position was repeated at unchanged principal on Oct 21, and no repayment, extension or default record has been found. The SpaceX master lease's fixed rate is set at a pricing that has not occurred; its closing is expected before year end 2026 and has not been confirmed. The Anthropic public S-1 has still not been filed; every Anthropic figure remains press-reported. The Broadcom

$60 billion package has no announced pricing or closing date; the $18 billion junior tranche has not launched. The Broadcom OpenAI package above $50 billion, the Oracle chip SPV and the Amazon $8 billion SPV are at talks stage with no terms. TeraWulf's $3 billion package has not launched (no FWP, 424B or 8-K in EDGAR); expected November. The Banco BPM EUR 400 million AT1 coupon remains unverified, so the AT1 benchmark is carried. The Volta loan's maturity, covenants and draw status remain undisclosed (press tier only). No public trustee performance report was located for any of the nine ABS families in the monthly collateral pass. These are blanks, not zeros, and they stay out of the aggregates until verified.

## 9 Federal land pipeline (BLM)

Watchlist annex. The Bureau of Land Management case ledger for data-center-related applications on federal land, discovered from BLM MLRS records alone (ledger as of 2026-11-01). These are land positions before any financing exists: no applicant in this annex has a bond in the registry, an EDGAR registrant record, or any obligation in the master table, and this annex carries no obligation entries and no dollar figures. The ledger holds 41 cases: 22 campus, 14 infrastructure, 5 unclassifiable; 35 are active (Pending, Authorized or Interim).

Acreage caveat: BLM's recorded acreage field is unreliable for pending cases. Recorded acreage sums to 15,832.95 acres over the active cases and 30,175.12 acres over all dispositions, but 8 active cases record 0.0 acres, including Project Beehive (Utah), described in its application at over 9,000 acres. Recorded figures are printed as filed.

## 10 Methodology and data

The monitor is an append-only weekly dataset. Each vintage carries forward all prior rows unchanged, stamped with their original `as_of` dates, and adds new rows for new observations. Corrections and status updates are new rows with `supersedes` pointers, never edits. The primary committed aggregate sums primary rows that have not been superseded. The vintage CSVs (entities, sources, obligations, obligation sources, borrower metrics, lender metrics, maturity wall) plus a synthesis note are archived under `data/vintages/2026-11-01/`.

Every statistic carries an evidence grade. Observed A is a number read directly from a primary document or a company announcement. Reconstructed B is a researcher calculation from Observed A inputs, such as the primary committed total. Estimated C is a modeled number with stated assumptions. Assumed C is a placeholder the program tracks explicitly rather than hiding. Company claims and researcher calculations are kept separate in the text. Thirteen new sources entered this vintage: eleven filed (the Alphabet, Microsoft, Amazon, Digital Realty and Equinix 10-Qs; the Microsoft FWP and 424B2; the Meta FWP, 424B5 and 8-K set; the Ares merger set; the Galaxy 8-K; the Waymo corroboration inside the Alphabet 10-Q), one press (the Dona Ana County vote report) and one regulatory (the monitor's TRACE store for Oct 26 to 30). The N-PORT holder set is counted inside the filed sources as one source row.

*Table note:* Dedup keys verified unique (superseded and memo rows skipped); no collisions. Thirteen supersedes rows were added this vintage (OBL-0127 to OBL-0134, OBL-0136 to OBL-0138, OBL-0140 and OBL-0142). Obligations total counts every row ever recorded, including superseded rows; the current primary count is 77 and the current memo count is 50.

What changed methodologically this issue: four things, all stated rather than silent. First, the base moved: the SpaceX amendment of Oct 26 postdates Issue 7, so this issue reconciles its deltas

against the amended dataset and prints the reconciliation in Section 1 instead of letting the $40,000 million appear as unexplained growth. Second, two daily-record accounts (the Meta $125 billion framing and the Ares Blue Owl account) were withdrawn in the daily record on Oct 27 after full reads of the filings, and this issue reports the corrected records with the withdrawals stated in Section 1; the weekly issue is the consolidation point at which a daily correction becomes part of the standing record. Third, the tier figure runs to Tier D this issue: the Q3 extractions did not include purchase obligation splits for Microsoft or Alphabet, and Amazon's lease extraction is not like-for-like, so Tier E is not computed for the Q3 filers and no Tier E bar is drawn. Fourth, Amazon's property and equipment commitments enter as a primary row on first extraction, labeled a coverage addition in the row note and in the delta composition, on the same convention Issue 7 applied to the TeraWulf revolver. The full debt-hunting checklist remains in permanent effect.

**Table 1:** Delta table: Issue 7 (vintage 2026-10-25, as amended 2026-10-26) to Issue 8 (vintage 2026-11-01).

| Item | Issue 7 | Issue 8 | Change |
|---|---|---|---|
