AI Infrastructure Leverage Monitor

Issue 9

Kilambi Research

8 November 2026

Standing weekly series. Vintage 2026-11-08.
All figures in USD millions unless stated.

Abstract

The funding machine did not slow down after the quarterly reports; it changed currency. Five note deals priced in four days added $44,692.8 million of primary committed debt (Reconstructed B), taking the dataset to $4,926,725.0 million over 82 current primary rows, up 0.92% on the week. Meta ran one program in two currencies: $15,000 million of dollar notes (priced Nov 3, completed Nov 5) and EUR 9,000 million of euro notes (final prospectus filed Nov 6, delivery expected Nov 12). Alphabet closed EUR 6,000 million of euro notes on Nov 5. Oracle closed a concurrent $20,000 million raise on Nov 4, half senior notes at coupons of 7.000 to 8.650 percent and half common stock at $116.00 per share. Equinix priced EUR 2,500 million of green notes through its Europe 2 financing subsidiary, guaranteed by the parent, settling Nov 9. Every deal is post-period against the Sep 30 balance sheets, so the week's growth is genuinely new borrowing, not re-measurement: the composition that Issue 8 lacked. The week's second filing is smaller and structurally larger than any of the deals: on Nov 4 Google signed credit support agreements backstopping Anthropic's rent under the 20-year Justified Leases at TeraWulf's Hawesville campus, about 401 MW of critical IT load, on terms that let Google assume the leases itself on an Anthropic default. The amount is not stated in the filing, and this dataset records it as an unquantified memo guarantee rather than guessing at the rent. On prices, the repricing entered a fourth week and changed complex: Nov 5 was a broad convertible selloff (nine TRACE flags on final prints, ten Tier-1 fires), Nov 6 partly reversed it, and the one new senior crossing was a CoreWeave line (U2069EAA8, final print 82.10 against a fund mark of 98.50), taking the census of prints more than 15 points below their fund marks from 22 entries to 23. No credit event was reported for any named credit. The standing verdict holds: economic leverage still exceeds headline debt, and headline debt is now growing in euros as fast as in dollars.

1 What changed since the last issue

Table 1: Delta table: Issue 8 (vintage 2026-11-01) to Issue 9 (vintage 2026-11-08).

Item	Issue 8	Issue 9	Change
Primary obligations (current)	77	82	+5 (all new note deals)
Primary committed ($M)	4,882,032.2	4,926,725.0	+44,692.8 (+0.92%)
Memo obligations	50	58	+8 (Oracle equity; Google backstop; six BDC positions)
Meta new notes	none	$15.0B USD and EUR 9.0B	one program, two currencies
Alphabet euro notes	none	EUR 6,000M closed	priced Nov 2, settled Nov 5
Oracle raise	none	$10.0B notes and $10.0B stock	closed Nov 4; stock leg is memo
Equinix euro green notes	none	EUR 2,500M priced	settlement Nov 9, after vintage date
Google backstop, Anthropic at TeraWulf	Fluidstack only	Hawesville added	filed Nov 4; amount not stated
Blue Owl BDCs, Nscale DDTL	no position	funded $55.2M, unfunded $180.8M	new at Sep 30, 2026 (both funds)
Carlyle CoreWeave funded	$28.7M (Dec 2025)	$16.3M (Sep 2026)	-43.3% in nine months, at about par
Monroe Crusoe loans	$27.0M (Dec 2025)	$3.7M (Sep 2026)	-86.2% in nine months, at about par
Prints more than 15 points below fund marks	22 entries (19 daily)	23 entries (20 daily)	+1: U2069EAA8 new senior crossing
TRACE flags on final prints	n.a.	23 over five sessions	Nov 5 selloff (9), Nov 6 reversal (6)
New CUSIPs in the bond registry	11	7	Apple benchmark stubs, weekly append
Fund marks (N-PORT bulk)	Jul 31, 2026	Jul 31, 2026	no change: no new bulk quarter (chain verified Nov 8)
Bank CET1 dashboard	Q2 2026 basis	Q2 2026 basis	no change: carried, fourth issue
FINRA market aggregates	through Oct 30	through Oct 30	no change: pull failed, eighth run
Coupon record	three conflicts open	two settled, one open	Alphabet and Meta settled by closing 8-Ks

Composition note. Issue 8's increase was re-measurement and coverage (92.5% of it, on its own decomposition). This week's increase is the opposite: all $44,692.8 million is new priced borrowing, in five deals, none of it inside a balance sheet aggregate the dataset already carries. The euro deals are stored in USD at 1.1253 per EUR, the last spot recorded in this dataset (Oct 6, 2026, in the note to the Digital Realty euro row of Issue 7's vintage), because no November spot was captured in the window; the EUR principals (9,000, 6,000 and 2,500 million) are the primary facts and are printed in every row note. A one cent move in the conversion rate moves the stored total by about $175 million (Reconstructed B), which is the size of the approximation the reader is accepting.

Meta's two deals are one funding program. The euro supplement (accession 0001193125-26-446110, filed Nov 4; FWP accession 0001193125-26-447522; final prospectus accession 0001193125-26-450754, filed Nov 6; Observed A) names the dollar offering as the Concurrent Securities Offering. The dollar terms, settled by the closing 8-K (accession 0001193125-26-450074, filed Nov 5), are $3,250 million at 5.850% due 2031, $3,250 million at 6.250% due 2033, $4,000 million at 6.550% due 2036, $1,750 million at 7.350% due 2046 and $2,750 million at 7.500% due 2056. The euro terms are EUR 1,750 million at 4.300% due 2031, EUR 1,250 million at 4.650% due 2033, EUR 1,000 million at 4.900% due 2035, EUR 1,750 million at 5.400% due 2038, EUR 1,750 million at 6.050% due 2044 and EUR 1,500 million at 6.400% due 2065, with delivery expected on or about Nov 12, 2026: the row is recorded at priced terms, the treatment Issue 8 applied to the Microsoft notes. Total Meta issuance in the window is $25,127.7 million on the stored conversion (Reconstructed B), one week after the same issuer priced $37.5 billion of equity and mandatory convertible preferred instead of debt. The rotation Issue 8 described has already rotated back: the equity pivot and the debt program are complements in one funding plan, not alternatives chosen once.

Alphabet's euro deal (preliminary supplement accession 0001193125-26-442515; FWP accession 0001193125-26-443857; closing 8-K accession 0001193125-26-449835; Observed A) priced Nov 2 and closed Nov 5: EUR 750 million floating rate due 2028 at three-month EURIBOR plus 0.50%, EUR 750 million at 3.700% due 2028, EUR 1,250 million at 4.050% due 2030, EUR 750 million at 4.250% due 2032, EUR 750 million at 4.500% due 2035, EUR 750 million at 4.875% due 2039 and EUR 1,000 million at 5.250% due 2045, at ratings of Aa2 (stable) and AA+ (stable). Oracle's raise (FWP accession 0001193125-26-443918; finals accessions 0001193125-26-445846 and 0001193125-26-445847; 8-K accession 0001193125-26-447507; Observed A) is the week's widest coupons at the weakest ratings of the five issuers: 7.000% due 2029, 7.450% due 2031, 7.850% due 2033, 8.000% due 2037 and 8.650% due 2046, with expected ratings at pricing of Baa2 (negative), BBB- (stable) and BBB (stable), and a concurrent 86,206,897 shares at $116.00 that closed the same day, Nov 4. The stock leg is a memo row: equity is not debt, and the exclusion is recorded so it can be audited, on the Meta precedent of Issue 8. Equinix's green notes (FWP accession 0001104659-26-122039; final accession 0001104659-26-122752; Observed A) are EUR 650 million at 4.150% due 2028, EUR 700 million at 4.800% due 2033, EUR 500 million at 5.100% due 2035 and EUR 650 million at 5.450% due 2038, issued by Equinix Europe 2 Financing Corporation LLC and unconditionally guaranteed by Equinix, Inc., settling Nov 9.

Two corrections from the daily record are consolidated here, on the Issue 8 convention. The coupon sets recorded on Nov 5 from browser-route reads of the Alphabet and Meta final prospectuses are withdrawn as misreads: the closing 8-Ks of Nov 5 carry the pricing term sheet coupons in both cases, and those coupons govern, in Meta's case matching the FINRA security master behind the five new CUSIPs. The third Nov 5 item, an apparent Oracle coupon conflict, stays open: the coupon sets as recorded in this program agree tranche by tranche, but this run did not re-read the two primary documents side by side, so the item is carried as a verification gap in Section 8 rather than closed on assertion. One figure correction of the program's own: the Nov 5 daily headline stated $187.8 million of combined Nscale unfunded commitments across the two Blue Owl funds; the schedule lines as printed sum to $180,783 thousand of debt unfunded, and the schedule sum

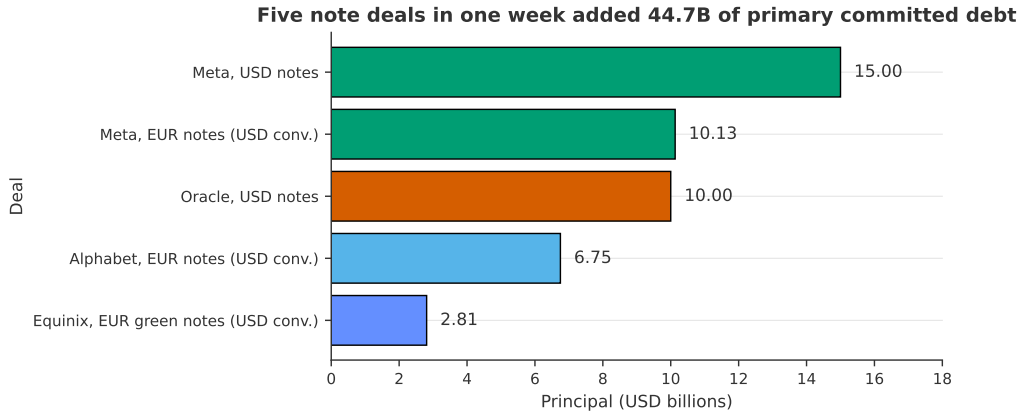

governs in this dataset, with the difference recorded as unreconciled in the source row.

The registry re-check produced one baseline break, one position decline and the usual week's worth of verified nulls. The break: Blue Owl Capital Corp's Q3 schedule (accession 0001655888-26-000069) carries AI infrastructure positions, ending the registry baseline that the fund held none. The decline is in Section 3. The nulls: GLEIF records showed no update all week (most recent remains Digital Realty Trust, Inc., Oct 22; the Nov 5 unverified GLEIF item was closed on Nov 6 with no in-window update), no-LEI searches returned no records, no new N-PORT or Form D bulk release posted (the 2026q4 N-PORT zip returns HTTP 404, re-verified by the weekly price chain on Nov 8, so the marks leg produced no MOVE or LOW flags), the EIA-860M September file remains the latest release (next release Nov 24), and the Franklin County script failed on truncated portal fetches all week, watermark not advanced, last completed result Oct 15. Holder reports filed in the week name Beignet, Sopaipilla and Galaxy Helios positions at Aug 31, 2026 report periods (the JPMorgan N-CSRS family was read in full) and are a registry delta only. The bond registry reconciliation the daily record left to this run is done: the issuer sweep's discovery leg found seven new Apple Inc benchmark CUSIPs on Nov 7 and again on Nov 8 (037833FC9, 037833FD7, 037833FE5, 037833FF2, 037833FG0, 037833FH8, 037833FJ4; the APPLE INC total rose from 92 to 99), its ratings leg stalled before any write on both days, and this run appended the seven to the registry as benchmark stubs with security terms unverified, taking the registry from 742 to 749 entries. The FINRA aggregate pull failed for the eighth consecutive run (token exchange HTTP 400); the aggregates stand through Oct 30 and the Nov 2, 3, 4, 5 and 6 sessions are missing from that file, a gap stated here rather than smoothed over.

2 Borrowers

No borrower balance sheet was re-measured this week, and the tier ladder therefore carries at its Issue 8 readings (Figures 2, 3 and 4 are carried unchanged and labeled as such). What changed is the layer above the balance sheets: post-period issuance, which the dataset records as discrete primary rows precisely so that a priced deal is never silently folded into a carrying aggregate. On a pro forma basis the week's deals put Meta's funded debt program for the quarter at $25,127.7 million of notes on top of the $37.5 billion equity package of Issue 8 (Reconstructed B), Alphabet's 2026 issuance past the $80.8 billion its Q3 report already counted, and Oracle's debt at $10,000 million above its Aug 31, 2026 aggregate of $125,337 million, with a matching $10,000 million of new equity beside it. The cross-currency pattern the debt-hunting checklist records (checklist A, item 3) is now the week's dominant fact: EUR 17,500 million was priced in euros by US-parented issuers this week (Alphabet, Meta and Equinix combined, Observed A), against $25,000 million priced in dollars by the same cohort (Meta and Oracle). The euro market is not a supplement to the dollar program; in this window it was 44% of it by stored value (Reconstructed B).

TeraWulf is the week's borrower-side filing after the deals. Its Q3 10-Q (filed Nov 6, accession 0001628280-26-071671; Observed A) records total debt of $3,113.4 million including the current portion at Sep 30, 2026, with short-term convertible notes of $491.5 million stated in the memo

Data as of 8 Nov 2026. Deals priced 2 to 4 Nov 2026; Meta EUR delivery expected 12 Nov and Equinix settlement 9 Nov, both after the vintage date.
Source: SEC EDGAR pricing term sheets, final prospectuses and closing 8-Ks (see report citations).
Note 1: EUR deals are shown at USD conversion 1.1253 per EUR, the last spot recorded in this dataset (6 Oct 2026); EUR principals are 9,000M, 6,000M and 2,500M. Note 2: Oracle also closed a 10.0B common stock offering in the same window; equity is excluded here and recorded as a memo row in the dataset.

Figure 1: Five note deals priced 2 to 4 Nov 2026 added $44.7 billion of primary committed debt: Meta in dollars and euros, Oracle in dollars, Alphabet and Equinix in euros. New figure for Issue 9.

record of the daily pass. The figure is not used to supersede the Q2 aggregate row: its composition as extracted is not like-for-like with the Q2 researcher sum of $5,213.1 million, which included the convertible stack the Q3 extraction states separately, and a supersede on a non-comparable basis would manufacture a decline that the filing does not establish. The treatment is the Equinix precedent of Issue 8 (source row, aggregate carries), and the reconciliation is an open item in Section 8. The same 10-Q confirms, in its subsequent events note, the item that matters more than its debt total: the Nov 4 Google credit support agreements and a Second Amended and Restated energy services agreement with Kentucky Power Company under which the second 500 MW phase of the campus carries a full 15-year term, holding total contracted capacity at 1,000 MW, subject to Kentucky Public Service Commission approval. Section 7 takes the backstop itself.

3 Lenders

Lender regulatory metrics are unchanged: thirteen lenders, CET1 ratios as of June 2026 reporting periods, all well above minimums (Figure 5). The Q3 refresh against bank regulatory filings is deferred for a fourth consecutive issue and is stated as such. The market gauges are treated in Section 5. No bank cut or suspended a buyback or dividend in the window (falsifier item checked, not triggered).

The week's lender evidence is in the BDC schedules, and it runs in both directions at once, which is what a maturing private credit book looks like. Entering: Blue Owl Technology Finance Corp. and Blue Owl Capital Corp. (10-Qs filed Nov 4, accessions 0001747777-26-000036 and 0001655888-26-000069; Observed A, amounts in thousands as printed) each carry, at Sep 30, 2026, a first lien delayed draw term loan to CoreWeave Financing DDTL V-V, LLC at SOFR plus 5.50% due September 2031, par $8,969, fair value $9,025, with $6,031 of unfunded commitment expiring De-

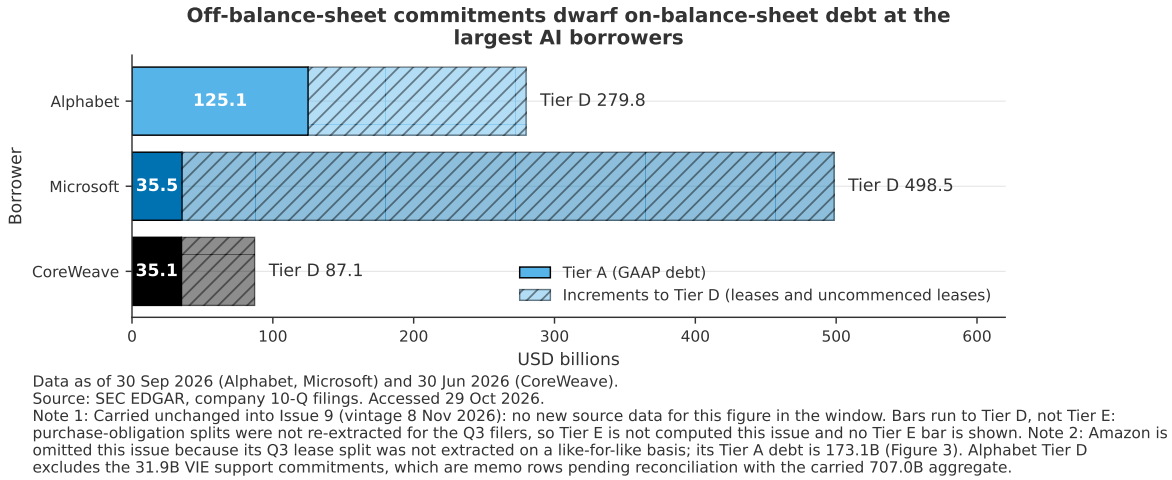

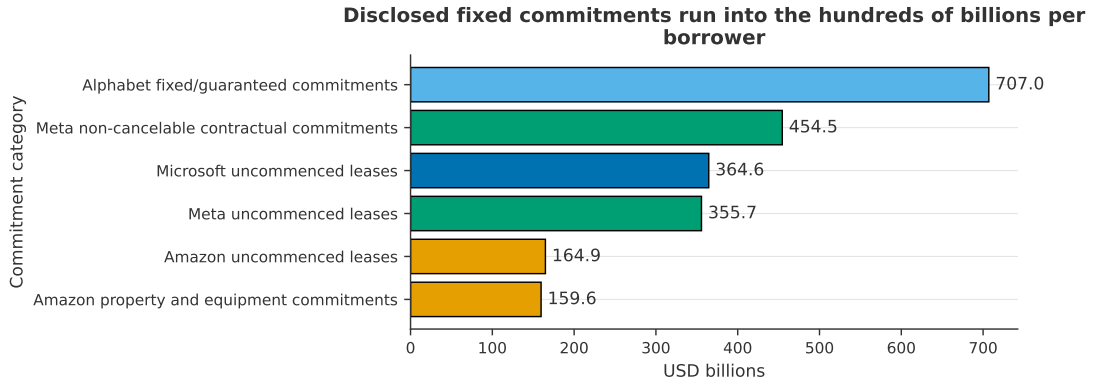

Figure 2: Off-balance-sheet commitments dwarf on-balance-sheet debt at the largest AI borrowers. Carried unchanged into Issue 9: no new balance-sheet data for this figure in the window. Alphabet and Microsoft are the Q3 2026 readings; CoreWeave carried at Jun 30, 2026; Tier E not computed.

cember 2026, identical as printed in both funds, a fact this dataset records rather than reconciles away. Each fund also carries Nscale Services UK Ltd first lien delayed draw loans at SOFR plus 5.00% due February 2031: funded $51,177 with $145,448 unfunded in Technology Finance, funded $3,990 with $35,335 unfunded in Capital Corp, combined funded $55.2 million and combined unfunded $180.8 million (Reconstructed B from the printed lines). Neither obligor appears in either fund's Dec 31, 2025 comparative schedule. Exiting, or at least shrinking: Carlyle Secured Lending's two CoreWeave Compute Acquisition loans stand at combined funded principal of $16,270 thousand at Sep 30, 2026 against $28,700 thousand at Dec 31, 2025 (10-Q filed Nov 5, accession 0001544206-26-000068; Observed A), and Monroe Capital Income Plus Corp's two Crusoe Energy Systems loans stand at $3,725 thousand against $27,016 thousand on the same comparison (10-Q filed Nov 6, accession 0001742313-26-000066; Observed A), with coupons reset higher (16.25 and 14.25%, against 15.00 and 13.00%) and both positions carried at about par. Positions carried at about par that shrink by 43 and 86% in nine months read as repayment or refinancing, not impairment: the obligors found other money, which is the checklist's replacement-funding test (checklist A, item 4) run in the borrower's favor for once. All six positions are memo rows under counting rule 5: they are lender-side views of obligor debt, evidence of who holds the risk, not additional debt.

Two gaps attach to this section and are stated with it. Carlyle's unfunded commitment on the CoreWeave obligors was not extracted (the commitments note was not reached in the daily read), so the dataset cannot yet restate the filer's total CoreWeave exposure against the KR-WP-2026-27 baseline of $60.5 million including $14.8 million unfunded at Dec 31, 2025: that is a paper-relevant registry item, flagged in the registry source row, and the funded leg of it is now known to have fallen. And the two Blue Owl funds' identical CoreWeave lines may be one position reported by two affiliated funds or two positions of the same size; the filings as read do not say, and the dataset prints both, as filed, in the memo layer where the ambiguity costs the aggregates nothing.

Data as of latest filings: Microsoft and Amazon refreshed to 30 Sep 2026 (Q3 2026 10-Qs, filed 28 and 30 Oct 2026); Meta at 30 Sep 2026; Alphabet at 30 Jun 2026.
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 1 Nov 2026.
Note 1: Each bar is an aggregate portfolio disclosed in filings, not a single contract; these commitments are not added to debt. Note 2: Carried unchanged into Issue 9 (vintage 8 Nov 2026): no new source data for this figure in the window.

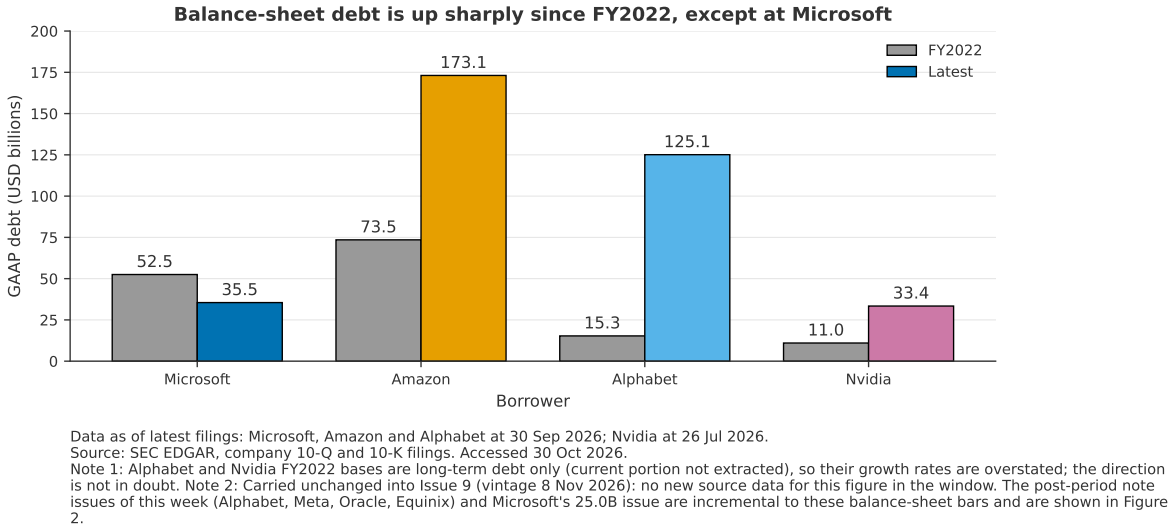

Figure 3: Disclosed fixed commitments run into the hundreds of billions per borrower. Carried unchanged into Issue 9 at the Issue 8 readings.

4 Maturity wall

The wall grows by 26 rows, every one a tranche of the week's five deals (Observed A, pricing documents as cited in Section 1). Meta adds $15,000 million due 2031 to 2056 and EUR 9,000 million due 2031 to 2065; Oracle adds $10,000 million due 2029 to 2046; Alphabet adds EUR 6,000 million due 2028 to 2045; Equinix adds EUR 2,500 million due 2028 to 2038. The shape does not change, and that is the finding: of the $44,692.8 million added, $40,273.4 million (90.1%, Reconstructed B) matures in 2031 or later, and the post-2030 concentrations in the summary figure rise for Meta (from $73.8 billion to $98.9 billion) and Oracle (from $90.3 billion to $98.3 billion), while the pre-2031 hyperscaler maturities stay modest (Figure 6). The issuers are not borrowing short because they cannot borrow long; at the week's coupons they are choosing duration, and the refinancing problem this program tracks stays where it was, in the neocloud and single-tenant complex whose paper Section 6 prices, not in the hyperscaler wall. The wall remains a floor for the standing reason: the commitment portfolios carry no dated schedule in the filings, so the week's additions to those portfolios enter the wall not at all.

5 Funding-stress gauges

No gauge is refreshed this issue, and the dashboard is carried at its Issue 8 basis with the carry stated on the figure (Figure 7). The monthly FRED pass last ran on Nov 1, 2026 (DGS10 last observation Oct 29 at 4.98%, 90-day change +30 basis points, one third of the warning level); the next monthly refresh runs with the first weekly run of December. The remaining gauges stand at their October market readings, September NDFI lending and Q2 2026 regulatory bases, with the processing deferral stated in Section 3. No gauge sits at historical stressed levels; the two at warning (Citi's uninsured-deposit share and State Street's LCR) are structural to their banks and

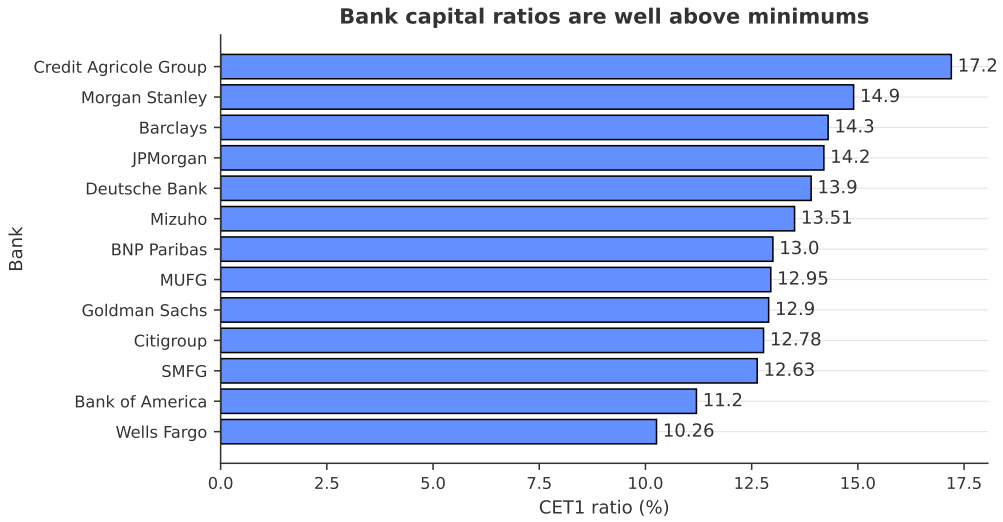

Data as of latest filings: Microsoft, Amazon and Alphabet at 30 Sep 2026; Nvidia at 26 Jul 2026.
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 30 Oct 2026.
Note 1: Alphabet and Nvidia FY2022 bases are long-term debt only (current portion not extracted), so their growth rates are overstated; the direction is not in doubt. Note 2: Carried unchanged into Issue 9 (vintage 8 Nov 2026): no new source data for this figure in the window. The post-period note issues of this week (Alphabet, Meta, Oracle, Equinix) and Microsoft's 25.0B issue are incremental to these balance-sheet bars and are shown in Figure 2.

Figure 4: Balance-sheet debt is up sharply since FY2022, except at Microsoft. Carried unchanged into Issue 9: the post-period issues of this week and of Issue 8 are incremental to these bars.

unchanged. Per checklist G, the calm dashboard is not read as an all-clear: the week's stress, such as it was, sat in convertible prices, which this dashboard would register only downstream, if at all.

6 The repricing, week four: a convertible selloff and a partial reversal

The repricing changed complex this week. The prior three weeks belonged to CoreWeave senior notes crossing fund-mark bands on final prints; this week's action was a one-day convertible selloff on Nov 5 and a partial reversal on Nov 6, with exactly one new senior crossing underneath it (all prints FINRA TRACE, Observed A, from the daily session records). Nov 2 carried three Tier-1 alerts and three TRACE flags (TeraWulf and CoreWeave convertibles, and IREN 46270CAJ8 down 8.13 points). Nov 3 carried one Tier-1 alert (Applied Digital converts, reference-drop) and three TeraWulf convertible rises. Nov 4 carried one Tier-1 alert (CoreWeave converts 21873SAL2) and two flags, one of them a non-convertible (QTSII 74690FBA3, down 6.13 points). Nov 5 was the event: ten Tier-1 fires and nine TRACE flags on final prints, every flag a convertible note of a neocloud or miner issuer (Applied Digital 038169AB4 down 36.53 points on the window; IREN lines down 17.84, 11.87 and 7.88; TeraWulf lines down 15.03 and 10.82; CoreWeave converts down 6.39 and 5.22). Press reporting on the day attributed the move to a report that Microsoft is tightening oversight of its outside data-center builders, with revised timelines at IREN's Childress campus (Estimated C context, as recorded in the daily memo). Nov 6 partly reversed it: six flags, five of them rises (IREN 46270CAF6 up 13.15, Applied Digital up 10.70, IREN lines up 9.59, 8.25 and 7.62), and one further fall (TeraWulf 88080TAB0, down 10.63, a repeat Tier-1 fire). Figure 8 shows the window for five representative lines.

Data as of June 2026 reporting periods.
Source: company regulatory filings and earnings releases. Accessed 27 Sep 2026.
Note 1: Only SMFG discloses a quantified AI-related exposure (JPY 4.0tn); all other banks disclose none. Note 2: Carried unchanged into Issue 9 (vintage 8 Nov 2026): no new source data for this figure in the window.

Figure 5: Bank capital ratios are well above minimums. Carried unchanged from Issue 7, through Issue 9.

The senior crossing matters more than the convertible noise, and it is stated separately so the two are not averaged together. On Nov 5 the CoreWeave 9.25% notes due 2030 (CUSIP U2069EAA8, the Reg S line) met the Tier-1 fund-mark test for the first time: final print 82.1047 against the Jan 31, 2026 fund mark of 98.50, a gap of 16.40 points (Observed A). The census of prints more than 15 points below their latest fund marks rose from 22 entries (19 daily-watched) to 23 (20), with no exits. That is a paper-relevant price record: U2069EAA8 sits in the KR-WP-2026-27 forensic inventory universe, and the crossing is flagged as such in the registry source row. No figure published in the paper changes.

Three readings, in the checklist's order. First, price signals still lead quantity signals, but this week's signal is about equity-linked paper, whose prices carry share-price beta that senior notes do not: a 36-point fall in a convertible trading at 199 is a different fact from a 16-point gap in a senior note trading at 82, and the monitor's language keeps them apart. Second, the escalation marker, SPV repricing spreading to public hyperscaler bonds, remains unconfirmed and this week points the other way: the same five sessions that sold the convertibles absorbed $44.7 billion of new hyperscaler and REIT notes, including 40-year and 41-year paper from Meta at 6.400% in euros and 7.500% in dollars. Third, the reversal on Nov 6 was partial and selective: the IREN and Applied Digital lines recovered a third to a half of the fall, the TeraWulf line fell again, and the CoreWeave senior crossing did not reverse at all on the recorded prints. No credit event was reported for any named credit in the window.

The fund marks behind the crossing test carry the standing caveat. They are N-PORT report-period values, in U2069EAA8's case Jan 31, 2026, because the 2026q4 bulk file has not been published;

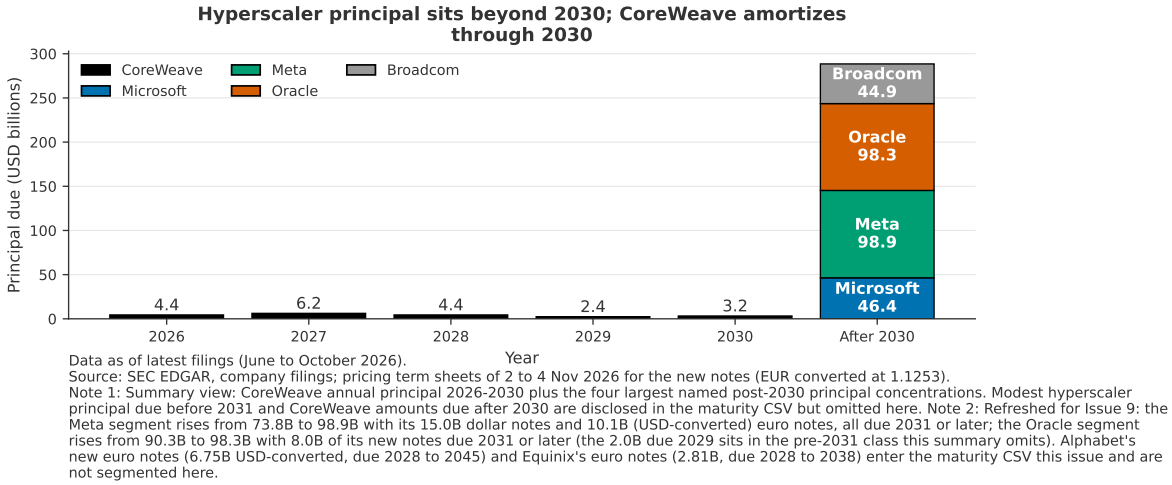

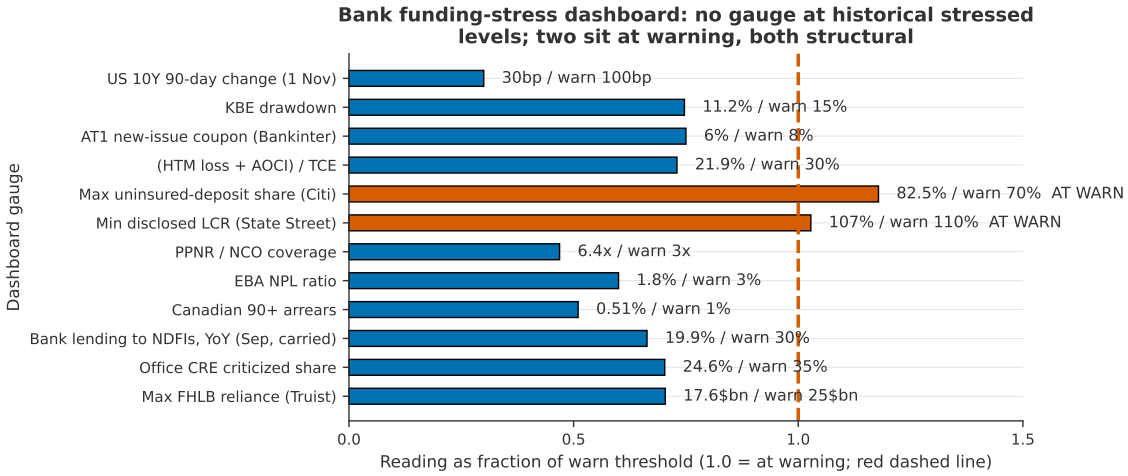

Figure 6: Hyperscaler principal sits beyond 2030; CoreWeave amortizes through 2030. Refreshed for Issue 9: the Meta and Oracle post-2030 segments include the Nov 2026 notes; Alphabet and Equinix tranches enter the maturity CSV and are not segmented in this summary view.

the weekly price chain re-verified the 404 on Nov 8. When the next bulk quarter lands the marks leg re-bases and some crossings will close mechanically. The reference-drop leg, which needs no fund mark, fired independently on the same complex all week. Both legs are reported; neither is hidden inside the other.

7 Rotating focus: the backstop economy, Google behind Anthropic at Hawesville

This issue's rotating focus is a filing with no number in it. On Nov 4, 2026, TeraWulf, its subsidiary Raylan Data LLC, Justified DataPower LLC, Anthropic, PBC and Google LLC entered three Credit Support Agreements, one per data hall (CB-1, CB-2, CB-3), under which Google backstops Anthropic's obligations under the 20-year Justified Leases at Hawesville, Kentucky: about 401 MW of critical IT load, deliveries phased from late 2027 to the second quarter of 2028 (Form 8-K filed Nov 4, accession 0001628280-26-069810, form of agreement at Exhibit 10.1; confirmed in the Q3 10-Q's subsequent events note; Observed A). On an Anthropic payment default or insolvency event, Google may pay the rent due and assume the lease as tenant, or in certain circumstances pay a termination fee that amortizes over a defined term and take an equity interest in Raylan. The backstop takes effect at the commencement date of the final hall under each lease and falls away if Anthropic holds investment grade ratings for at least three months. The leases were amended the same day.

The structure is not new; its tenant is. Google already stands behind TeraWulf's Fluidstack leases in this dataset's baseline record, and Alphabet's Q3 report (Issue 8) disclosed $10.0 billion of backstops behind its own Crux AI joint venture and $31.9 billion of total VIE support commitments. Hawesville adds the third pattern to the same map: a hyperscaler credit supporting a frontier model

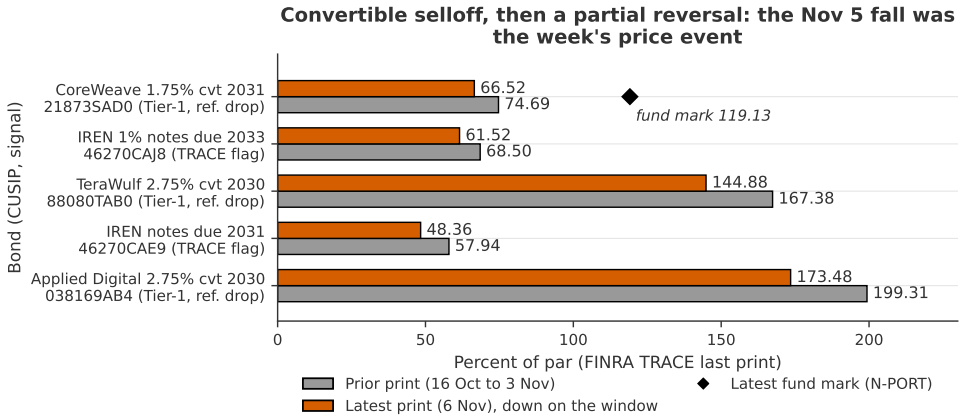

Data as of 8 Nov 2026: no gauge refreshed this issue. Gauge 1 stands at the 1 Nov 2026 monthly FRED pass (DGS10 last observation 29 Oct 2026 at 4.98 percent; 90-day change +30bp against 30 Jul 2026 at 4.68 percent); gauges 2 and 3 carried at 16 Oct closes and benchmark; NDFI carried at Sep 2026; regulatory gauges carried at Q2 2026.
Sources: FRED (Federal Reserve Bank of St. Louis), series DGS10, retrieved 1 Nov 2026 via freddl; Finnhub (KBE); Bankinter press release (AT1 benchmark); Fed H.8 (NDFI); KR-WP-2026-12 (regulatory gauges).
Note 1: Ratios computed as value/warn (higher is worse) or warn/value (lower is worse); direct labels show the underlying numbers. The two gauges at warning are structural to their banks (Citi uninsured-deposit mix; State Street custody balance sheet), not new stress. Note 2: Carried into Issue 9: the monthly FRED refresh runs with the first weekly run of each month (last run 1 Nov 2026), and no bank cut or suspended a buyback or dividend in the window (falsifier checked, not triggered).

Figure 7: Bank funding-stress dashboard: carried unchanged into Issue 9 at the 1 Nov 2026 basis stated on the figure. No gauge at historical stressed levels; two sit at warning, both structural.

company's rent at a third-party developer's campus, so that the developer can finance against a lease whose tenant could not, on its own credit, support 20-year project debt at anything like the same price. Each party's position is legible. TeraWulf gets a financeable lease. Anthropic gets capacity without the debt on its own balance sheet, at the moment its public S-1 has still not been filed. Google gets an option, on default, to step into 401 MW of powered capacity as tenant, or to convert its support into an equity interest in the project company. The circular financing map (analytical build 7) gains a filed example in which the circle runs through a guarantee rather than through equity or a lease: compute demand, to tenant lease, to developer financing, to hyperscaler credit support, to the hyperscaler's own strategic interest in the capacity.

What the monitor can and cannot do with it is the point of the focus. The exposure is real: a 20-year rent stream on 401 MW is a large number under any rent assumption. The filing states no rent, no aggregate lease value and no cap on the support, so the dataset records the agreement as a memo guarantee row with no amount (OBL-0151), excluded from the aggregates, with the structure, the parties, the term and the fall-away condition in the row note. Putting a modeled rent into the primary total would violate the program's first rule (unknown exposure remains unknown, never inferred), and omitting the row would hide a filed credit commitment from the record. The memo layer exists for exactly this case. The row joins a growing class that Issue 9's reader should hold in view together: Alphabet's $31.9 billion of VIE support commitments (memo, Issue 8), the Crux AI backstops inside it, the Fluidstack support in the baseline, and now Hawesville. The support economy is becoming a standard layer of the buildout's capital structure, disclosed in prose, sized

Data as of 6 Nov 2026 (FINRA TRACE prints; Grade A). Fund mark is the SEC N-PORT period shown in Issue 8.
Sources: monitor TRACE store (trace_trades.duckdb); daily filings pull memos, 3 to 8 Nov 2026.
Note 1: Prices are percent of par. Every bond shown is a convertible or equity-linked note: these moves partly track the underlying shares and are not senior-note repricing. The week's one new senior crossing is CoreWeave 9.25% due 2030 (U2069EAA8), final print 82.10 on 5 Nov against a fund mark of 98.50 (gap 16.40 points), which enters the census in the text. Note 2: The Nov 6 prints partly reversed Nov 5: IREN 46270CAE9 rose 8.25 points on Nov 6 and 038169AB4 rose 10.70, while TeraWulf 88080TAB0 fell a further 10.63.

Figure 8: The Nov 2 to 6 repricing: prior print against latest print for five convertible lines that produced Tier-1 alerts or TRACE flags in the window, with the latest fund mark where the N-PORT panel carries one. All five are equity-linked instruments; the week's one new senior crossing, U2069EAA8, is treated in the text.

in almost none of the filings that create it. Where a later filing states a figure (a lease commitment table, a guarantee footnote with a maximum, a project financing sized against the leases), the row will be re-based to a primary amount at that vintage, with the supersede recorded. Until then the honest entry is the one with the blank.

One candidate consequence is recorded for the program owner, not acted on by this run: the daily pass named the Justified Data Campus a project-page candidate under the standing gate (a named deal with a running record and a filed backstop). No page was created by this issue.

8 What we do not know

The monitor's unknowns are stated plainly. The Google backstop at Hawesville carries no amount: the Justified Leases' aggregate rent is not disclosed, and the support's maximum exposure is therefore unknown. TeraWulf's Q3 debt total ($3,113.4 million as extracted) is not reconciled line by line against the Q2 researcher sum ($5,213.1 million), so the borrower's aggregate carries at Q2 and the difference is a stated gap, not a decline. Carlyle Secured Lending's unfunded commitment on its CoreWeave obligors was not extracted, so the filer's total CoreWeave exposure cannot be restated against the $60.5 million baseline in the KR-WP-2026-27 record. The Oracle coupon item of Nov 5 stays open as a verification gap: the recorded coupon sets agree, and the two primary documents were not re-read side by side in this run. The euro conversion uses the Oct 6 spot (1.1253) because no November spot was captured; the stored euro deal values move by about $175 million

in aggregate for each cent of movement in the rate (EUR 17,500 million of principal times 0.01; Reconstructed B). The seven new Apple CUSIPs carry no verified security terms: the sweep log records CUSIPs only, and the registry stubs say so. Bank Q3 regulatory detail (HTM and AOCI, deposit mix, LCR, NDFI lending) has not been processed into the dashboard basis for a fourth consecutive issue. The FINRA market aggregates are missing the Nov 2, 3, 4, 5 and 6 sessions after eight consecutive failed pulls. The Yucca loan's current status remains unknown: the stated maturity passed on Sep 18, 2026 and no repayment, extension or default record has been found. The SpaceX master lease's fixed rate is set at a pricing that has not occurred; its closing is expected before year end 2026 and has not been confirmed. The Anthropic public S-1 has still not been filed; every Anthropic figure remains press-reported except its filed lease and support documents as a counterparty. The Broadcom $60 billion package has no announced pricing or closing date. TeraWulf's $3 billion package has not launched. The Banco BPM EUR 400 million AT1 coupon remains unverified, so the AT1 benchmark is carried. No public trustee performance report was located for any of the nine ABS families in the November collateral pass, which stands at Nov 1. These are blanks, not zeros, and they stay out of the aggregates until verified.

9 Federal land pipeline (BLM)

Watchlist annex. The Bureau of Land Management case ledger for data-center-related applications on federal land, discovered from BLM MLRS records alone (ledger as of 2026-11-08). These are land positions before any financing exists: no applicant in this annex has a bond in the registry, an EDGAR registrant record, or any obligation in the master table, and this annex carries no obligation entries and no dollar figures. The ledger holds 41 cases: 22 campus, 14 infrastructure, 5 unclassifiable; 35 are active (Pending, Authorized or Interim).

Acreage caveat: BLM's recorded acreage field is unreliable for pending cases. Recorded acreage sums to 15,832.95 acres over the active cases and 30,175.12 acres over all dispositions, but 8 active cases record 0.0 acres, including Project Beehive (Utah), described in its application at over 9,000 acres. Recorded figures are printed as filed.

10 Methodology and data

The monitor is an append-only weekly dataset. Each vintage carries forward all prior rows unchanged, stamped with their original `as_of` dates, and adds new rows for new observations. Corrections and status updates are new rows with `supersedes` pointers, never edits. The primary committed aggregate sums primary rows that have not been superseded. The vintage CSVs (entities, sources, obligations, obligation sources, borrower metrics, lender metrics, maturity wall) plus a synthesis note are archived under `data/vintages/2026-11-08/`.

Every statistic carries an evidence grade. Observed A is a number read directly from a primary document or a company announcement. Reconstructed B is a researcher calculation from Observed A inputs, such as the primary committed total. Estimated C is a modeled number with stated assumptions. Assumed C is a placeholder the program tracks explicitly rather than hiding. Company claims and researcher calculations are kept separate in the text. Nine new sources entered this vintage: seven filed (the Alphabet, Meta dollar, Meta euro, Oracle and Equinix offering document sets; the TeraWulf 8-K and 10-Q set; the four BDC 10-Qs), one regulatory (the monitor's TRACE store for Nov 2 to 6) and one registry consolidation (the week's GLEIF, bulk, EIA-860M, Franklin County, holder-report and issuer-sweep results).

Table note: Dedup keys verified unique (superseded and memo rows skipped); no collisions. No supersedes rows were added this vintage: no carried row was replaced, because no like-for-like remeasurement landed in the window. Obligations total counts every row ever recorded, including superseded rows; the current primary count is 82 and the current memo count is 58.

What changed methodologically this issue: three things, all stated rather than silent. First, the euro deals are stored in USD at a conversion rate that is itself a carried observation (the Oct 6 spot in the dataset's own record), with the EUR principals printed as the primary facts and the sensitivity

Table 2: Dataset inventory, vintage 2026-11-08.

File	Rows	Change vs Issue 8
Entities	90	+2
Sources	122	+9 (7 filed, 1 regulatory, 1 registry)
Obligations	157	+13 (5 primary, 8 memo)
Obligation sources	158	+13
Borrower metrics	37	0
Lender metrics	13	0
Maturity wall	112	+26

stated in Section 1: the alternative treatments, storing EUR amounts inside a USD-labeled total or omitting three filed deals until a fresh spot is captured, are both worse, and the chosen one is auditable from the row notes. Second, a filed guarantee with no stated amount enters as a memo row with a blank amount rather than not entering at all: the record now distinguishes a known commitment of unknown size from no commitment, which the Hawesville agreements require and the earlier VIE memo row anticipated. Third, the issuer sweep's two failed write legs are reconciled by this run rather than left for a third discovery: the weekly run is the consolidation point for the daily record, and a CUSIP discovered twice in the sweep log is a registry fact even when the sweep cannot write it, so the append is made here with its terms marked unverified. The collateral and ratings pass is monthly and did not run this week; it last ran with Issue 8 on Nov 1, 2026, and collateral.json stands at that date. The full debt-hunting checklist remains in permanent effect.
