AI Infrastructure Leverage Monitor

Issue 6

Kilambi Research

18 October 2026

Standing weekly series. Vintage 2026-10-18.
All figures in USD millions unless stated.
Contact: research@kilambi.com

Abstract

This issue's main subject is price, not quantity. The monitor's sixth issue records two new primary obligations and two new memo rows, which lift primary committed credit to $4,320,436.0 million (Reconstructed B), up $5,010.5 million (0.12%) from Issue 5. The closed financing is Volta Infrastructure's $5 billion leveraged loan, sold on Oct 15 at 95 cents on the dollar and a yield above 11% after arrangers pitched 97 to 98 a week earlier; the banks kept only the $1.3 billion term loan behind the Bitdeer lease and left the $3.7 billion chip loan with investors. The second primary row is a registry delta: a first-lien loan to the Project Jupiter vehicle Yucca Growth Infrastructure, LLC, held by Apollo Debt Solutions BDC ($10.539 million principal, 6.75%, stated maturity Sep 18, 2026, already past at filing), new to the forensic record. The memo rows are STACK Infrastructure seeking a $6 billion Melbourne loan (Bloomberg, Oct 15) and Bridge Data Centres negotiating a facility expansion to about $6.6 billion (Bloomberg, Oct 12), both unclosed. The week's trading gave the bond watch its busiest session: on Oct 16 the daily TRACE comparison produced three Tier-1 alerts and three TRACE flags, including CoreWeave 5-year CDS peaking above 1,140bp and settling near 1,038bp while Oracle 5-year CDS hit a record 288bp (S&P Global Market Intelligence and LSEG via press summaries). The funding-stress dashboard calmed: the US 10Y 90-day change slowed to +54bp (level 5.09% Oct 16) and KBE recovered to -11.2% from peak; the AT1 primary market printed a new deal and no bank cut a buyback or dividend in Q3 earnings week. The standing verdict from Issue 1 holds: economic leverage exceeds headline debt, the excess is disclosed rather than hidden, and the market is now putting a price on the buildout's junior risk, one print at a time.

9 Methodology and data **9**

1 What changed since the last issue

Table note: Primary committed is a researcher calculation (Reconstructed B) from filed and company-announced obligations (Observed A). Superseded rows are excluded from the current count and the aggregate; they remain in the file as history. Memo rows are excluded from all aggregates.

The new rows, in order of size:

- OBL-0117: Volta Infrastructure Holdings' $5 billion leveraged loan, sold Oct 15, 2026 at 95% of par (press tier; the sale was reported by multiple outlets, including Yahoo Finance and Seeking Alpha syndication). SOFR+650bp, yield above 11%, pitched at 97 to 98 cents a week earlier by arrangers JPMorgan and Goldman Sachs. The reported structure is split: the banks underwrote only the $1.3 billion term loan behind the Bitdeer data-center lease; the $3.7 billion chip loan, about 36,000 Nvidia GPUs, sits with investors (CLO managers among the buyers). Recorded as one row for the $5 billion sale; the two legs are described in the notes and are not counted twice. Anthropic has signed a six-year compute agreement at the Norway site. The equity cushion is $300 million against $5 billion of debt, about 5.7% of the capital structure. Terms include a prepayment penalty and a coupon step-up if the company is ever rated. Maturity was not disclosed in the reporting reviewed, so no maturity-wall row is generated.
- OBL-0118: the Yucca Growth Infrastructure, LLC first-lien loan, found in Apollo Debt Solutions BDC's (CIK 1837532) Form N-14 8C/A, filed Oct 14, 2026 (accession 0001193125-26-421669; Observed A). The schedule of investments (period Jun 30, 2026) reads: principal $10,539 thousand, cost $10,175 thousand, fair value $9,896 thousand (93.9% of principal), 6.75% (S+300, 0.00% floor), stated maturity Sep 18, 2026. The stated maturity passed before the filing date, and no repayment, extension or default record was found in the week's sources: the loan's current status is unknown, not assumed. This is the forensic re-check's registry delta for the week, and the first named private-credit lender row against a watched SPV.

Two memo rows (counting rule 6: press-only claims are memo at most):

- OBL-0119: STACK Infrastructure seeking a five-year A$8.6 billion ($6 billion) loan for a Melbourne data center (Bloomberg, Oct 15; Observed A, press tier). Banks named to arrange and underwrite; campus not identified. Proposed, not closed.
- OBL-0120: Bridge Data Centres (Bain Capital) negotiating to expand an existing bank facility (US$2.8 billion secured in 2025) to approximately US$6.6 billion (Bloomberg, Oct 12; Observed A, press tier); could be introduced to lenders as early as November. The $6.6 billion is the target size of the expanded facility, not an incremental amount. Talks, not finalized.

The TRACE leg was the week's real action. No new N-PORT quarter was published (the 2026q4 file returns 404), so fund marks stay at report period Jul 31, 2026 and the marks leg produced no

MOVE or LOW flags. The daily collector produced the signals instead: on the Oct 16 session, the monitor's TRACE store fired three Tier-1 alerts and three TRACE flags. The CoreWeave 1.75% converts due 2032 (CUSIP 21873SAH1) printed 70.10, down from 77.04 the prior session, newly crossing to more than 15 points below the Jul 31 fund mark of 88.22; the CoreWeave 2.875% converts due 2033 (21873SAL2) printed 81.95, down 7.85 points to a TRACE flag; IREN notes due 2031 (46270CAE9) printed 57.94, 12.01 points below reference; TeraWulf notes due 2032 (88080TAE4) printed 86.23, 12.29 points below reference; TeraWulf 2.75% notes due 2030 (88080TAB0) printed 164.27, up 18.61 points, an up move in a convertible trading above par and not a distress signal. CUSIPs 21873SAH1 and 21873SAL2 are KR-WP-2026-27 inventory bonds, so the alerts are paper-relevant as a price record; no figure published in the paper changes.

The identity pass closed Yucca as not_found (EDGAR company search returns no matching company, no issuer CIK; FINRA BondSearch issuerName EQUAL returned Record-Total 0 for six tested variants, including the bare YUCCA stem; the position is a BDC loan, not a TRACE bond) and added registry-name coverage for seven already-proven families (Dell Technologies, SK hynix, Hewlett Packard Enterprise, Hut 8, Applied Digital, Vertiv, Super Micro Computer). No family was proven this week, so the daily sweep's issuer list is unchanged; the Oct 18 sweep covered 87 issuers with no new CUSIPs. The collateral and ratings pass is monthly and was skipped this week per cadence. The Franklin County PublicSearch script failed on a truncated portal fetch on Oct 14, 16, 17 and 18; the failure is logged and its watermark was not advanced.

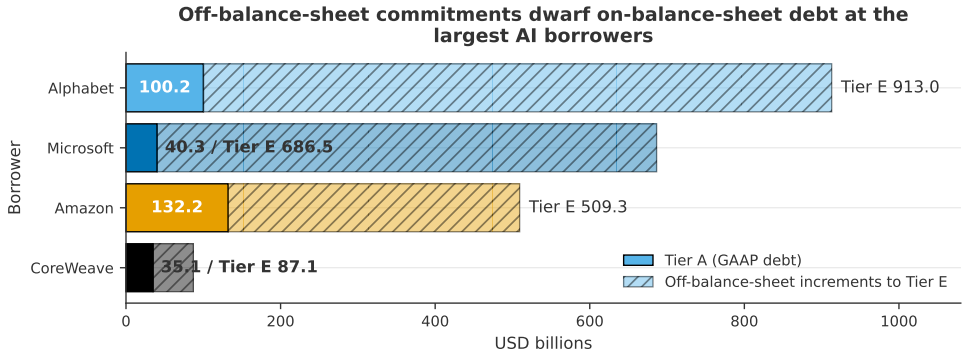

2 Borrowers

No borrower-metric row moves this issue: no quarterly filing arrived in the window. The borrower story this week is on the price side, not the balance-sheet side. Figure 1 carries the Tier A versus Tier E comparison for the four largest borrowers. Alphabet's Tier E of $913.0 billion stands against Tier A of $100.2 billion; Microsoft $686.5 billion versus $40.3 billion; Amazon $509.3 billion versus $132.2 billion (Observed A, SEC filings). The gap between the two remains the monitor's central borrower finding and is unchanged.

Figure 2 carries the FY2022-to-latest balance-sheet debt comparison and Figure 3 the disclosed fixed-commitment portfolios. Both are unchanged. The closed Volta loan is a 2026-vintage debut borrower's first debt; the memo rows are all prospective.

3 Lenders

Lender regulatory metrics are unchanged: thirteen lenders, CET1 ratios as of June 2026 reporting periods, all well above minimums (Figure 4). Q3 bank earnings releases (8-K exhibits) landed Oct 13 to 16 for the large banks, but the 10-Qs that carry the regulatory detail had not been processed into the dashboard basis as of this run, so the quarterly metrics carry; the full Q3 refresh moves to Issue 7. No bank cut or suspended a buyback or dividend in the window (falsifier item checked,

Data as of 30 Jun 2026.
Source: SEC EDGAR, company 10-Q filings. Accessed 27 Sep 2026.
Note 1: Tiers are cumulative per program definitions; each bar shows Tier A plus the incremental off-balance-sheet amount to reach Tier E. CoreWeave Tier E equals Tier D (no purchase commitments disclosed beyond leases). Note 2: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026.

Figure 1: Off-balance-sheet commitments dwarf on-balance-sheet debt at the largest AI borrowers. Carried unchanged from Issue 4; no borrower re-measurement in this vintage.

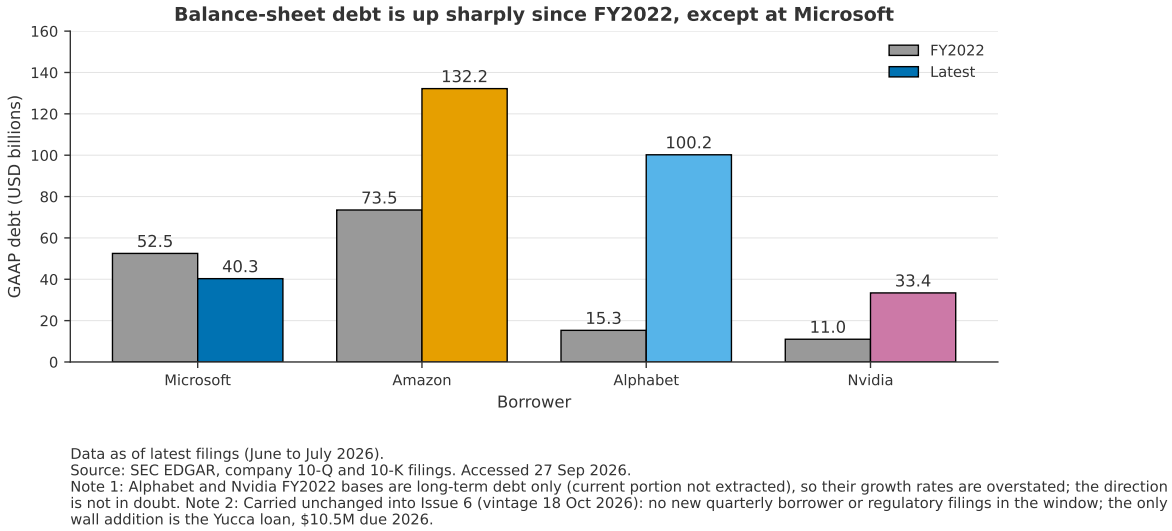

not triggered).

Volta's sale is the week's clearest absorption reading, and it is a sharper version of the Waymo pattern from Issue 5. Ten private-credit, insurer and asset-manager lenders absorbed Waymo's $5 billion with no bank lender named at all. Volta's $5 billion drew a harder buyer line: the banks (JPMorgan and Goldman Sachs, the arrangers) kept only the $1.3 billion term loan behind the Bitdeer lease, and investors took the $3.7 billion chip loan at 95 cents with a 6.5-point spread, a prepayment penalty, and a ratings step-up trigger. Read against each other: debut AI-cloud credit clears the market only when the banks hold the lease-backed piece and the junior-most economics (the GPU collateral) price like a distressed loan. This is originate-to-distribute with the risk kept where the banks will not hold it.

The Yucca row adds a small but precise lender-side datum. Apollo Debt Solutions BDC holds a first-lien loan to a Project Jupiter vehicle at 93.9 cents of principal on fair value, and the stated maturity passed with no repayment record. The amount is $10.539 million, immaterial to the aggregate; the evidence value is the chain it opens for the forensic program: a named Apollo-managed lender against a watched SPV, and a maturity event with no documented resolution. Apollo is now present in the dataset as an arranger (Broadcom, SpaceX), a BDC lender of record (Yucca), and the recurring private-credit node in the supplier-financing structures.

4 Maturity wall

The wall grows by one row: Yucca's $10.5 million first-lien loan, due 2026, its status unresolved. Volta's $5 billion discloses no maturity and generates no wall row. Figure 5 is carried from Issue 4: CoreWeave amortizes $4.4, $6.2, $4.4, $2.4, and $3.2 billion of principal over 2026 to 2030, while the large hyperscaler concentrations sit beyond 2030.

Data as of latest filings (June to July 2026).
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 27 Sep 2026.
Note 1: Alphabet and Nvidia FY2022 bases are long-term debt only (current portion not extracted), so their growth rates are overstated; the direction is not in doubt. Note 2: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026.

Figure 2: Balance-sheet debt is up sharply since FY2022, except at Microsoft. Carried unchanged from Issue 4.

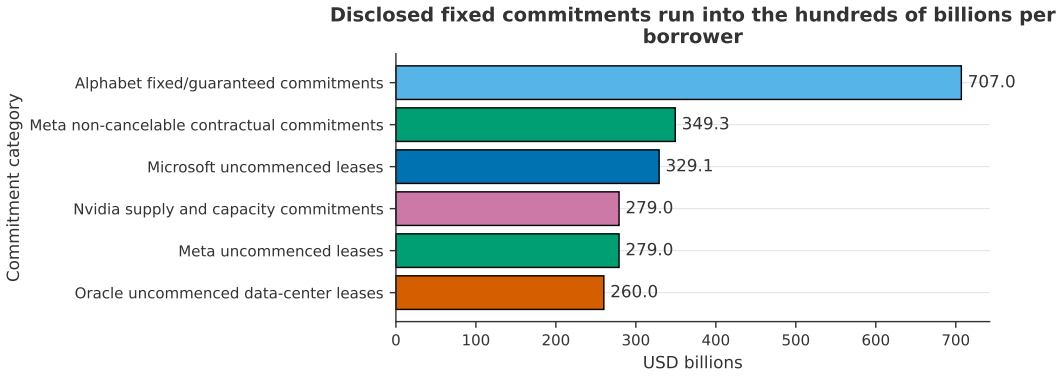

5 Funding-stress gauges

The twelve-gauge banking funding-stress dashboard is refreshed on its two market gauges with available prints this week; ten gauges carry (Figure 6). No gauge sits at historical stressed levels. Two gauges sit at warning, both structural to their banks and unchanged: Citi's maximum uninsured-deposit share of 82.5 percent (warn 70 percent) and State Street's minimum disclosed LCR of 107 percent (warn 110 percent).

The refreshed readings:

- US 10Y 90-day change: +54bp (level 5.09% Oct 16), down from +60bp. The velocity slowed for a second consecutive issue: the level fell 13bp from the Oct 8 close as yields eased into Oct 16. The +100bp warn was not crossed. The gauge's velocity construction now understates the level stress less than it did a week ago, since the level itself retreated.
- KBE drawdown: -11.2% (close $63.62 Oct 16, from the Aug 14 close peak of $71.67), improved 0.7 points from Issue 5's -11.9%. Bank stocks held up through Q3 earnings week even as AI credit repriced. Still above the -15% warn.

Carried readings: AT1 new-issue coupon benchmark at 6.0% (Bankinter, Oct 7); a Banco BPM EUR 400 million perpetual AT1 printed Oct 14 but its coupon could not be verified in this run, so the benchmark is not replaced and the coupon is logged as a data gap. Bank lending to NDFIs carries at +19.9% YoY ($2.064tn, September monthly; the October monthly figure is not yet published). The eight quarterly gauges carry Q2 values: Q3 earnings releases landed Oct 13 to 16, but the 10-Qs that carry HTM/AOCI, deposit-mix and LCR detail had not been processed into the basis. Per checklist G, a calm funding dashboard is not read as an all-clear for buildout

Data as of latest filings (May to July 2026).
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 27 Sep 2026.
Note 1: Each bar is an aggregate portfolio disclosed in filings, not a single contract; these commitments are not added to debt. Oracle figure is from the May 2026 10-K and was not repeated in the August 10-Q. Note 2: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026.

Figure 3: Disclosed fixed commitments run into the hundreds of billions per borrower. Carried unchanged from Issue 4.

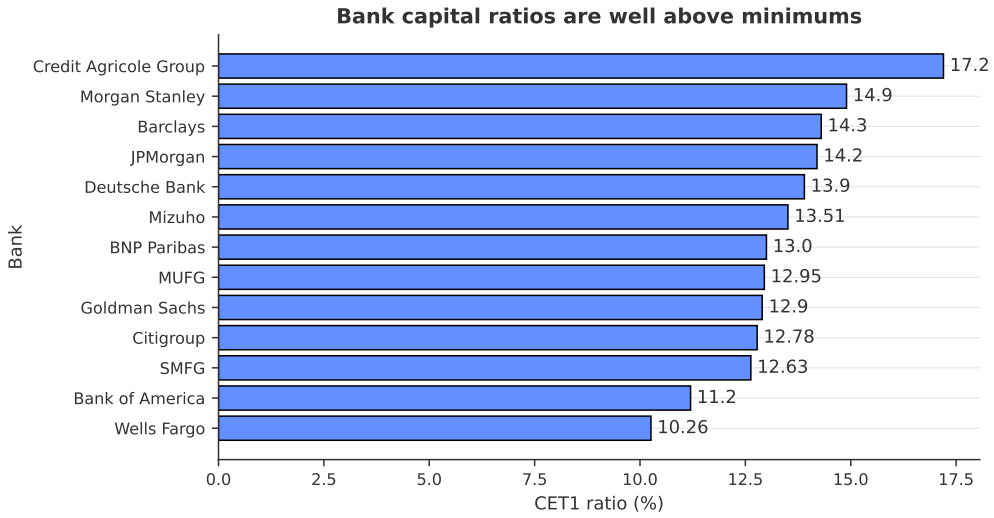

solvency: the week's stress was in borrower and SPV credit prices, which the gauges would catch only downstream, as a funding event at a lender.

6 The repricing week: price signals lead quantity signals

The checklist's standing rule is that price signals lead quantity signals, and this is the week it described. The quantity aggregates barely moved (+0.12%); the prices moved everywhere. Figure 7 plots the five flagged prints.

The new data points, with grades. CoreWeave's 5-year CDS peaked above 1,140bp on Oct 15 and settled near 1,038bp, up 164% in a year (S&P Global Market Intelligence and LSEG via The Inference; Observed A, press tier). Anything above 1,000 reads as distress in standard market language. Oracle's 5-year CDS hit a record 288bp; one Reuters summary put it near 300bp; SoftBank printed 424bp. Reuters also reported record CDS levels for Amazon, Alphabet and Meta, from far lower bases. The Oct 15 secondary comparison (Data Phoenix, press tier) put Beignet/Hyperion a little below 91, two Hut 8 project bonds about 93 and 91, QTS Project Excalibur bonds below 87, and CoreWeave bonds below 75 with the 2031 yield near 16%. The reviewed sources reported no missed payment, bankruptcy, debt acceleration or project cancellation for any named credit: this is repricing, not a credit event.

Two checklist readings sharpened. First, the escalation marker from Issue 5, SPV repricing spreading to public hyperscaler bonds, now has a fuller shape: Oracle's record CDS and the hyperscaler CDS records are public-corporate marks moving with the project paper, though from far lower levels than CoreWeave's. The falsifier list's stronger form, sustained widening of non-tech investment-grade spreads coincident with hyperscaler supply days, is not observed: the widening is AI-specific, not market-wide. Second, the marginal-buyer reading from Volta (Section 3) has a number now: 95

Data as of June 2026 reporting periods.
Source: company regulatory filings and earnings releases. Accessed 27 Sep 2026.
Note 1: Only SMFG discloses a quantified AI-related exposure (JPY 4.0tn); all other banks disclose none. Note 2: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026.

Figure 4: Bank capital ratios are well above minimums. Carried unchanged from Issue 4.

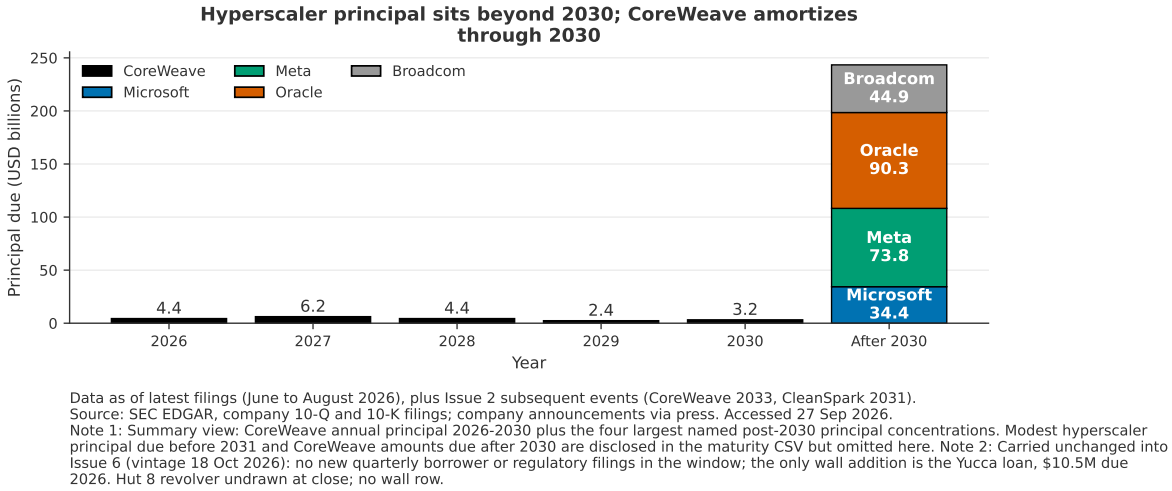

cents and a yield above 11%, rivaling the highest borrowing cost paid anywhere in the AI buildout. Every neocloud that follows prices off that print.

The IMF's October Global Financial Stability Report, summarized in the press this week, frames the aggregate behind the prices: 14 AI deals since 2023 reviewed, about $300 billion of equity investments and $650 billion of debt against $1.4 trillion of future revenue commitments, with Alphabet, Amazon, Meta, Microsoft and Oracle at nearly 10% of global investment-grade corporate bond issuance so far in 2026 (Observed A, press tier summary of the report; the report itself was not read in full). The monetization arithmetic the report flags is the same one in the program's stranding analysis: debt is serviceable only if the revenue commitments materialize.

7 Rotating focus: what the prices say about the circular map

This issue's rotating focus re-reads the circular-financing map (checklist build 7) through this week's prices. The map from Issue 5 supplier credit (Broadcom) arranging customer debt, chip SPVs, and private credit funding junior layers against the same compute demand, is unchanged in structure. What the prices add is a ranking of which nodes the market charges for first.

The neocloud borrower pays first. CoreWeave's CDS at 1,038bp and its 2032 converts at 70.10 are the distress corner: capital spending exceeds revenue every quarter since Q1 2024, Q2 2026 free cash flow was about minus $5.7 billion (SEC filings via The Inference), and the bond market is charging for refinancing risk, not just credit risk. Management's defense, CEO Mike Intrator's internal memo calling the reaction irrational and citing a backlog above $100 billion (two thirds

Data as of latest filings (June to August 2026), plus Issue 2 subsequent events (CoreWeave 2033, CleanSpark 2031).
Source: SEC EDGAR, company 10-Q and 10-K filings; company announcements via press. Accessed 27 Sep 2026.
Note 1: Summary view: CoreWeave annual principal 2026-2030 plus the four largest named post-2030 principal concentrations. Modest hyperscaler principal due before 2031 and CoreWeave amounts due after 2030 are disclosed in the maturity CSV but omitted here. Note 2: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026. Hut 8 revolver undrawn at close; no wall row.

Figure 5: Hyperscaler principal sits beyond 2030; CoreWeave amortizes through 2030. Carried unchanged from Issue 4; the Yucca row is in the CSV.

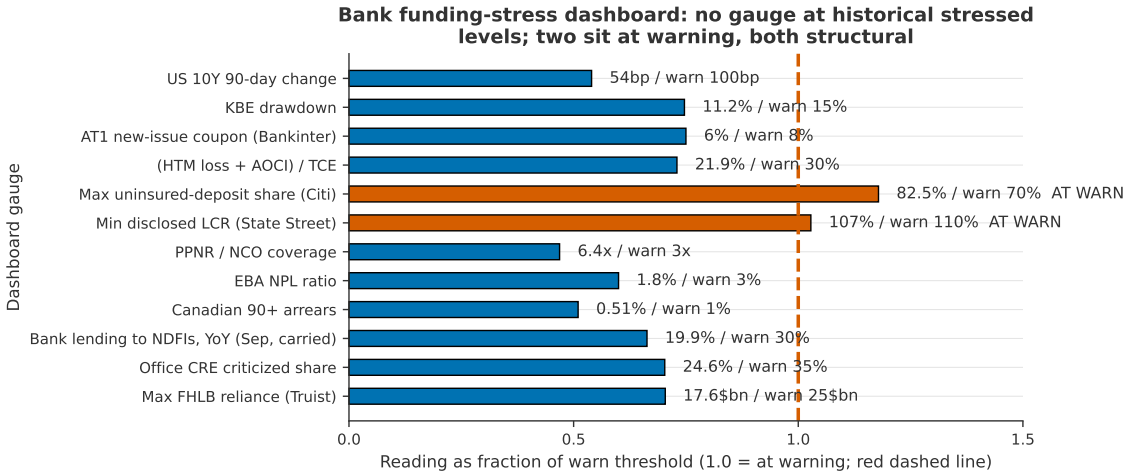

with investment-grade customers), is recorded as the company's claim, not the monitor's finding: the backlog number is the offset the market is choosing to discount.

The supplier-financed nodes pay next. Volta at 95 cents with 6% equity against $5 billion of debt is the new marginal print for AI-cloud startup credit; the structure (banks on the lease-backed tranche, investors on the GPU tranche) is the underwriting template the market will copy or reject. The Oracle chip SPV talks and the SpaceX $40 billion discussions stay memo, but they now negotiate against a CDS tape that puts Oracle at a record 288bp.

The contracted base pays last, and the prelease tripwire has not fired: the monitor's 95% monitored coverage against the 80% tripwire is unchanged, and no verified tenant walkaway from energized capacity is recorded. This is the order the program's stranding sequence predicted (checklist C): uncontracted and price-exposed layers break first, utilization breaks before price, the contracted base stays tight longest. The week gave no evidence against it.

8 What we do not know

The monitor's unknowns are stated plainly. The Volta loan's maturity, covenants, and draw status are undisclosed (press tier only). The Yucca loan's current status is unknown: the stated maturity passed with no repayment, extension or default record. The Anthropic public S-1 has still not been filed; every Anthropic figure remains press-reported. The Broadcom $60 billion package has no announced pricing or closing date; the $18 billion junior tranche has not launched. The Broadcom ¿$50 billion OpenAI package, the Oracle chip SPV, and the SpaceX $40 billion package are at talks stage with no terms. The Amazon $8 billion SPV is at discussions stage. TeraWulf's $3 billion package has not launched (no FWP, 424B, or 8-K in EDGAR); expected November. The NEXTDC A$1.1 billion converts' settlement is confirmed by low-tier press only. APLD's

Data as of 18 Oct 2026: 10Y and KBE refreshed to Oct 16 closes; AT1 benchmark carried (a Banco BPM EUR 400M print on Oct 14 could not be coupon-verified); NDFI carried at Sep 2026; regulatory gauges carried at Q2 2026 (Q3 earnings released Oct 13 to 16; 10-Qs pending).
Sources: FRED DGS10 via Eco3min mirror and US Treasury daily par curve (10Y); Finnhub (KBE); Bankinter press release (AT1 benchmark); Fed H.8 Oct 9, 2026 (NDFI); KR-WP-2026-12 (regulatory gauges).
Note 1: Ratios computed as value/warn (higher is worse) or warn/value (lower is worse); direct labels show the underlying numbers. The two gauges at warning are structural to their banks (Citi uninsured-deposit mix; State Street custody balance sheet), not new stress. Note 2: US 10Y closed 5.09% on Oct 16, down from 5.22% on Oct 8; the 90-day change slowed to +54bp. KBE closed 63.62 on Oct 16 (-11.2 percent from the Aug 14 close peak of 71.67). Note 3: Carried unchanged into Issue 6 (vintage 18 Oct 2026): no new quarterly borrower or regulatory filings in the window; the only wall addition is the Yucca loan, $10.5M due 2026.

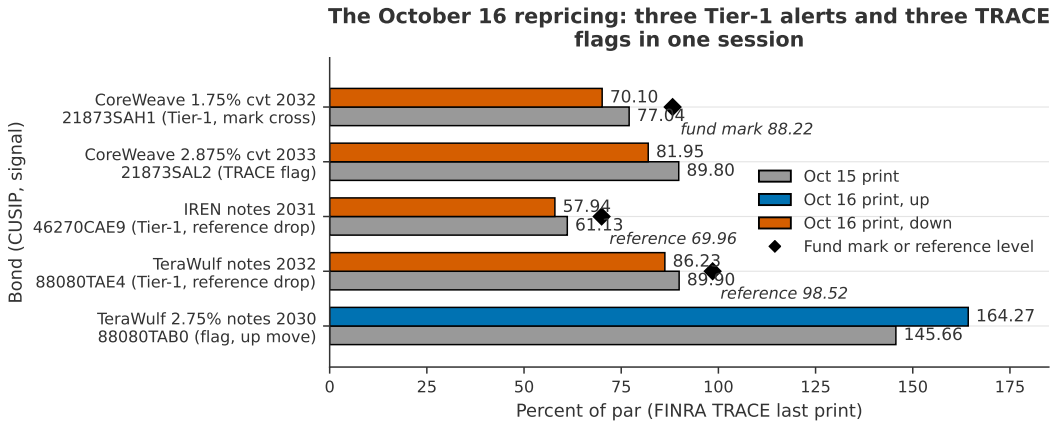

Figure 6: Bank funding-stress dashboard: 10Y and KBE refreshed to 16 Oct 2026; AT1 benchmark, NDFI and eight quarterly gauges carried. No gauge at historical stressed levels; two sit at warning, both structural.

Base Electron PPA (˜1,200 MW) has no disclosed tenor, pricing, or payment terms and cannot be sized. The AirTrunk green loan's tenor, pricing, and lien position are undisclosed. The $38 billion Oracle-leased construction-debt distribution overhang is Bloomberg-via-secondary reporting; discount levels are unconfirmed. The Banco BPM EUR 400 million AT1 coupon is unverified, so the AT1 benchmark is carried. These are blanks, not zeros, and they stay out of the aggregates until verified.

9 Methodology and data

The monitor is an append-only weekly dataset. Each vintage carries forward all prior rows unchanged, stamped with their original `as_of` dates, and adds new rows for new observations. Corrections and status updates are new rows with `supersedes` pointers, never edits. The primary committed aggregate sums primary rows that have not been superseded. The vintage CSVs (entities, sources, obligations, obligation sources, borrower metrics, lender metrics, maturity wall) plus a synthesis note are archived under `data/vintages/2026-10-18/`.

Every statistic carries an evidence grade. Observed A is a number read directly from a primary document or a company announcement. Reconstructed B is a researcher calculation from Observed A inputs, such as the primary committed total. Estimated C is a modeled number with stated assumptions. Assumed C is a placeholder the program tracks explicitly rather than hiding. Com-

Data as of 16 Oct 2026 (FINRA TRACE prints; Grade A). Fund marks are SEC N-PORT report period 31 Jul 2026.
Sources: monitor TRACE store (trace_trades.duckdb); daily filings pull memo, 17 Oct 2026.
Note 1: Prices are percent of par. The reference level is the highest of the previous trade date's last print, the current trade date's first print, and the last print before the current five-trade-day window. Note 2: The TeraWulf 2030 move is up, in a convertible trading well above par; it is a flag under the 5-point rule, not a distress signal.

Figure 7: The October 16 repricing: three Tier-1 alerts and three TRACE flags in one session. Prices are percent of par. The TeraWulf 2030 move is up, in a convertible trading above par; it is a flag, not a distress signal.

pany claims and researcher calculations are kept separate in the text. Eight new sources entered this vintage: one filed (Apollo Debt Solutions BDC N-14 8C/A), six press tier, and one regulatory (the monitor's TRACE store).

Table note: Dedup keys verified unique (superseded rows skipped); no collisions. No supersedes rows were added this vintage.

What changed methodologically this issue: one thing. The Issue 5 funding-stress gauge refresh schedule anticipated a full Q3 refresh in Issue 6; it is deferred to Issue 7 because the 10-Qs carrying the regulatory detail had not been processed into the basis as of Oct 18. The market gauges refreshed on schedule; the quarterly gauges carry explicitly. The full debt-hunting checklist remains in permanent effect.

Table 1: Delta table: Issue 5 (vintage 2026-10-11) to Issue 6 (vintage 2026-10-18).

Item	Issue 5	Issue 6	Change
Primary obligations (current)	70	72	+2
