AI Infrastructure Leverage Monitor

Issue 7

Kilambi Research

25 October 2026

Standing weekly series. Vintage 2026-10-25.
All figures in USD millions unless stated.

Abstract

Quantity returned this week, and it came from one filing. Meta Platforms' third-quarter 10-Q, filed Oct 22 for the period ended Sep 30, 2026, re-measures the largest commitment stock in the monitor: non-cancelable contractual commitments of $454.52 billion, up $105.21 billion (30.1%) in one quarter, and leases not yet commenced of $355.73 billion, up $76.74 billion (27.5%). Three superseding rows lift primary committed credit to $4,508,805.0 million (Reconstructed B), up $188,369.0 million (4.36%) from Issue 6; almost all of the increase is Meta's re-measurement, not new borrowing. The week's genuinely new credit is small, bank-led and short. Nebius signed a $3.5 billion one-year Citibank bridge on Oct 17, at Term SOFR plus 2.75% rising 0.25% per quarter to a 3.50% cap, secured by substantially all borrower assets, to fund GPU buildout (6-K filed Oct 22; Observed A). TeraWulf upsized its Morgan Stanley senior secured revolver from $250 million to about $400 million (8-K filed Oct 23; Observed A). The repricing of Issue 6 extended for a second week: seven Tier-1 alerts and a run of TRACE flags across the Oct 19 to 23 sessions, including the CoreWeave 9.25% senior notes due 2030 crossing to more than 15 points below their June fund mark, with a final print of 84.16 on Oct 22. At the Oct 23 tape end, 25 registry entries print more than 15 points below their latest fund mark. No credit event was reported for any named credit. The standing verdict holds: economic leverage exceeds headline debt, the excess is disclosed rather than hidden, and this week the disclosure itself grew by about a third at the monitor's largest commitment holder while the market kept charging more for the buildout's junior risk.

10 Methodology and data **14**

1 What changed since the last issue

Table note: Primary committed is a researcher calculation (Reconstructed B) from filed and company-announced obligations (Observed A). Superseded rows are excluded from the current count and the aggregate; they remain in the file as history. Memo rows are excluded from all aggregates.

The new and superseding rows, in order of size:

- OBL-0123 (supersedes OBL-0020): Meta Platforms' non-cancelable contractual commitments at Sep 30, 2026 of $454,520 million, against $349,310 million at Jun 30, 2026 (Form 10-Q filed Oct 22, 2026, accession 0001628280-26-066773; Observed A). One quarter added $105,210 million of contractual commitment, an increase of 30.1%.
- OBL-0122 (supersedes OBL-0019): Meta leases not yet commenced of $355,730 million, against $278,990 million at Jun 30, 2026. The filing describes the portfolio as data centers, energy-related infrastructure, colocations and network, commencing in the remainder of 2026 through 2036 on terms of 1 to 30 years. The increase is $76,740 million, or 27.5%, in one quarter.
- OBL-0121 (supersedes OBL-0018): Meta operating lease liabilities of $31,173 million ($2,522 million current and $28,651 million non-current), against $28,654 million at Jun 30, 2026. The recognized lease stock grew 8.8% while the uncommenced stock grew 27.5%: the pipeline is expanding faster than it is being absorbed onto the balance sheet.
- OBL-0124: Nebius Group's $3.5 billion bridge facility, signed Oct 17, 2026 and reported on Form 6-K filed Oct 22, 2026 (accession 0001104659-26-117978; Observed A). Senior secured term loan; borrowers are Nebius Group N.V., Nebius Inc. and Nebius B.V.; Citibank, N.A. is mandated lead arranger and lender. Margin starts at Term SOFR plus 2.75% and rises 0.25% for each 90-day period after signing, capped at 3.50%; maturity Oct 16, 2027; voluntary prepayment at par; a minimum liquidity covenant; security over substantially all borrower assets, including the shares of the US and Dutch borrowers. Purpose as filed: GPU infrastructure buildout and general corporate purposes. The drawn amount is not stated.
- OBL-0125: TeraWulf's senior secured revolving credit facility at about $400 million of total commitments, as amended Oct 23, 2026 (Form 8-K, accession 0001628280-26-067100; Observed A). Amendment No. 1 to the May 7, 2026 agreement with Morgan Stanley Senior Funding, Inc. as administrative and collateral agent raises commitments from $250 million, adds an uncommitted accordion of about $150 million (excluded from the dataset row, because it is uncommitted), and eliminates the $150 million letter of credit sublimit. The May 2026 facility was not previously in the dataset, so the full $400 million enters the aggregate as a coverage addition; the in-window increase is about $150 million. The drawn amount and the facility maturity are not stated in the 8-K.

Meta's debt itself did not drive the delta. The 10-Q reports long-term debt carrying value of $80,922 million at Sep 30, 2026, against $58,744 million at Dec 31, 2025, and total notes principal

unchanged at $84,000 million on the same maturity schedule as at Q2 (2027: $2,750 million; 2028: $1,500 million; 2029: $1,000 million; 2030: $5,000 million; thereafter: $73,750 million), including the May 2026 issuance of $25.00 billion of senior unsecured notes. The monitor's Meta debt aggregate row is carried on its Q2 basis this vintage, for the reason stated in Section 10.

The registry re-check produced two deltas, neither of which changes a figure published in KR-WP-2026-27. First, three Form NPORT-P reports filed Oct 21 (report period Aug 31, 2026) record small holdings in two watched project bonds: Sopaipilla Investor LLC positions of $90,000, $7,521,000 and $7,563,000 of principal in three funds, and Galaxy Helios Data Centers II LLC positions of $6,572,000 and $13,224,000 in two of them (Observed A). These are individual fund filings inside the current N-PORT quarter, not a new bulk release. Second, a BDC exchange prospectus in the Oct 21 full-text pass repeats the Yucca Growth Infrastructure first-lien position at the same $10,539 thousand principal recorded in Issue 6: corroboration at unchanged terms, not a resolution. The loan's status after its Sep 18, 2026 stated maturity remains unknown. One GLEIF record renewed in the window (Digital Realty Trust, Inc., Oct 22) with no relationship change. The EIA-860M September 2026 file posted on Oct 23 and was scanned in full in the Oct 24 daily run, with no watched-name result. The Franklin County recorder script failed on truncated portal fetches throughout the week; its watermark was not advanced and its last completed result (Oct 17) matches baseline.

The bond price watch ran on both of its legs. The N-PORT chain checked for the 2026q4 bulk file again in this run (Oct 25): it returns HTTP 404, so fund marks stay at report period Jul 31, 2026 and the marks leg produced no MOVE or LOW flags. The TRACE leg produced the week's signals, detailed in Section 6. Three of the flagged CUSIPs (21873SAB4, 21873SAH1, 21873SAL2) are KR-WP-2026-27 inventory bonds, so the week's prints are paper-relevant as a price record; no figure published in the paper changes.

The identity pass worked two families, the full step (ii) queue. No crosswalk record carried candidate status. A scan of the bond registry against the crosswalk found exactly two issuer strings not covered by any record's registry names: WULF COMPUTE LLC (2 bonds) and MARVELL TECHNOLOGY GROUP LTD (1 bond). Both families were already proven in the Oct 15, 2026 probes (BondSearch totals: WULF COMPUTE LLC 2; MARVELL TECHNOLOGY GROUP LTD 2) and both names already sit in the daily sweep list; the pass completed the registry-names linkage on the TeraWulf and Marvell crosswalk records, so the registry's 107 issuer strings are now fully covered. A BondSearch re-proof attempted twice in this run timed out at page load both times, the same wall that failed the Oct 25 daily sweep; the proof stands on the 2026-10-15 record and is recorded as such. No family was newly proven, none was closed as not found, and the pass recorded no bonds that the registry lacks. The collateral and ratings pass is monthly and was skipped this week per cadence; the October pass ran with Issue 5.

The BLM pre-financing tier produced no tripwire event. The weekly EDGAR leg (scripts/blm_edgar_watch.py, run Oct 25) queried all 19 watchlist names: zero registrant hits and zero transport failures, with 11 filing mentions across 7 names, all in the named filers' own routine filings and none in this week's window or recording a financing for a BLM case. No name is promoted. The annex at Section 9 is

regenerated as of Oct 25, 2026.

2 Borrowers

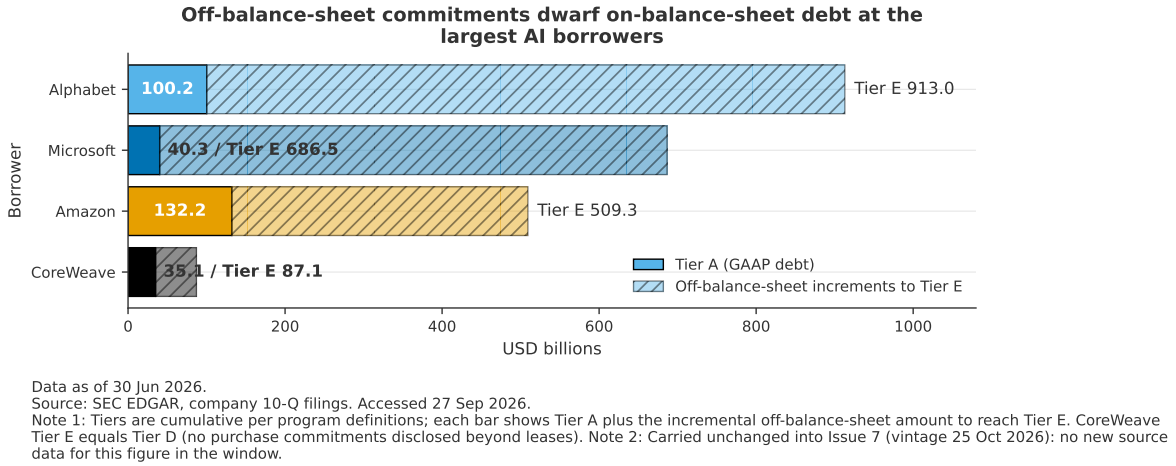

One borrower re-measured this issue, and the re-measurement is the issue. Meta's Q3 2026 filing (period ended Sep 30, 2026) puts the two commitment portfolios that anchor tiers (d) and (e) of the program's leverage ladder at $355.73 billion of uncommenced leases and $454.52 billion of non-cancelable contractual commitments. Both grew by roughly 30% in a single quarter, against recognized operating lease liabilities of $31.17 billion and notes principal of $84.00 billion. The quarter's capital expenditure, including finance-lease principal payments, was $34.91 billion, and the company raised full-year 2026 capex guidance to $135 billion to $145 billion (Observed A, 10-Q). Press coverage of the earnings week recorded the equity market's response: Meta shares fell about 9% on the week after the report, with free cash flow turning negative in the quarter (press tier, market summaries of Oct 23). The credit record in this dataset is quieter and, for the monitor's purposes, more informative: nothing in the filing accelerates, reprices or conditions the commitment stock. It simply grows.

Figure 2 is refreshed for the two Meta bars. Meta's non-cancelable commitments are now the second-largest single commitment portfolio in the figure, behind only Alphabet's $707.0 billion, and its uncommenced leases ($355.7 billion) move ahead of Microsoft's $329.1 billion. No other borrower filed a quarterly report in the window, so Figures 1 and 3 carry: Alphabet's Tier E of $913.0 billion stands against Tier A of $100.2 billion; Microsoft $686.5 billion versus $40.3 billion; Amazon $509.3 billion versus $132.2 billion (Observed A, SEC filings, as of Jun 30, 2026). On the Q3 readings, Meta's disclosed commitment portfolios alone (the uncommenced leases and the non-cancelable commitments, which the dataset records as separate primary rows under its counting rules) total $810.25 billion (Reconstructed B), before any recognized lease or debt figure. That is the scale the tier ladder exists to make visible, and it grew by $181.95 billion in one quarter.

The two smaller borrowers who did act tell the opposite end of the same story. Nebius, a neocloud with $8,545.7 million of balance-sheet debt at Q2, added a $3.5 billion one-year bridge: a 41% increase in its debt stock if fully drawn, on a one-year tenor, at a spread that rises every quarter it stays outstanding. TeraWulf added about $150 million of revolver commitments. At the hyperscaler end, commitments grow by $182 billion in a quarter with no new borrowing at all; at the neocloud end, borrowing is short, secured and priced to be refinanced. Both ends are leverage. They are not the same risk, and the tier ladder keeps them apart.

3 Lenders

Lender regulatory metrics are unchanged: thirteen lenders, CET1 ratios as of June 2026 reporting periods, all well above minimums (Figure 4). The full Q3 refresh against bank 10-Qs, anticipated in Issue 6 for this issue, is deferred a second time and stated as such: the 10-Qs carrying HTM,

Data as of 30 Jun 2026.
Source: SEC EDGAR, company 10-Q filings. Accessed 27 Sep 2026.
Note 1: Tiers are cumulative per program definitions; each bar shows Tier A plus the incremental off-balance-sheet amount to reach Tier E. CoreWeave Tier E equals Tier D (no purchase commitments disclosed beyond leases). Note 2: Carried unchanged into Issue 7 (vintage 25 Oct 2026): no new source data for this figure in the window.

Figure 1: Off-balance-sheet commitments dwarf on-balance-sheet debt at the largest AI borrowers. Carried unchanged from Issue 6; no new source data for this figure in the window (Meta is not in the figure's borrower set).

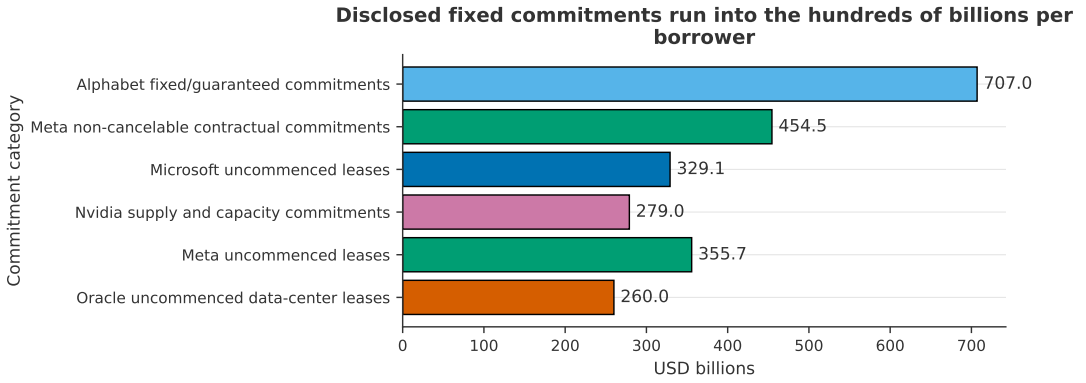

deposit-mix and commitment detail had not been processed into the dashboard basis as of this run. The market gauges are treated in Section 5. No bank cut or suspended a buyback or dividend in the window (falsifier item checked, not triggered).

The week's lender-side information is in the two signed deals, and both are bank deals on bank terms. Citibank took the whole Nebius bridge as mandated lead arranger and lender of record in the 6-K: $3.5 billion, one year, fully secured, with a minimum liquidity covenant and an escalating margin. That is bridge underwriting in its classic form: the bank holds the exposure while the borrower builds, and the price steps up until the borrower refinances into term markets or repays. Morgan Stanley's TeraWulf amendment is smaller and structurally similar in spirit: commitments up, the letter of credit sublimit removed, collateral release provisions added, and the full amended text deferred to the Q3 10-Q, which is where the monitor will read the covenants.

Read against Issue 6, the absorption pattern has rotated. Last week the marginal $5 billion (Volta) cleared only with banks holding the lease-backed tranche and investors taking the GPU tranche at 95 cents. This week the marginal credit is two bank facilities with no distribution reported at all. One week is not a trend; the monitor records the rotation without calling it one. What can be said is narrower: at the neocloud margin, the bank bridge and the sold leveraged loan are now both live templates, and the bridge is the more expensive promise to keep, because its spread rises on a schedule whether or not the term market reopens.

4 Maturity wall

The wall grows by one row: the Nebius bridge, $3,500 million of principal due in 2027 (maturity Oct 16, 2027). It is the largest single 2027 addition since the monitor began, and it is deliberately short: the facility's escalating margin means the refinancing question arrives within two quarters,

Data as of latest filings: Meta refreshed to 30 Sep 2026 (Q3 2026 10-Q, filed 22 Oct 2026); other bars May to July 2026.
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 25 Oct 2026.
Note 1: Each bar is an aggregate portfolio disclosed in filings, not a single contract; these commitments are not added to debt. Oracle figure is from the May 2026 10-K and was not repeated in the August 10-Q. Note 2: Refreshed for Issue 7: the two Meta bars are the Q3 2026 readings (commitments 454.5B, up from 349.3B at Q2; uncommenced leases 355.7B, up from 279.0B); all other bars carried unchanged, no new source data in the window.

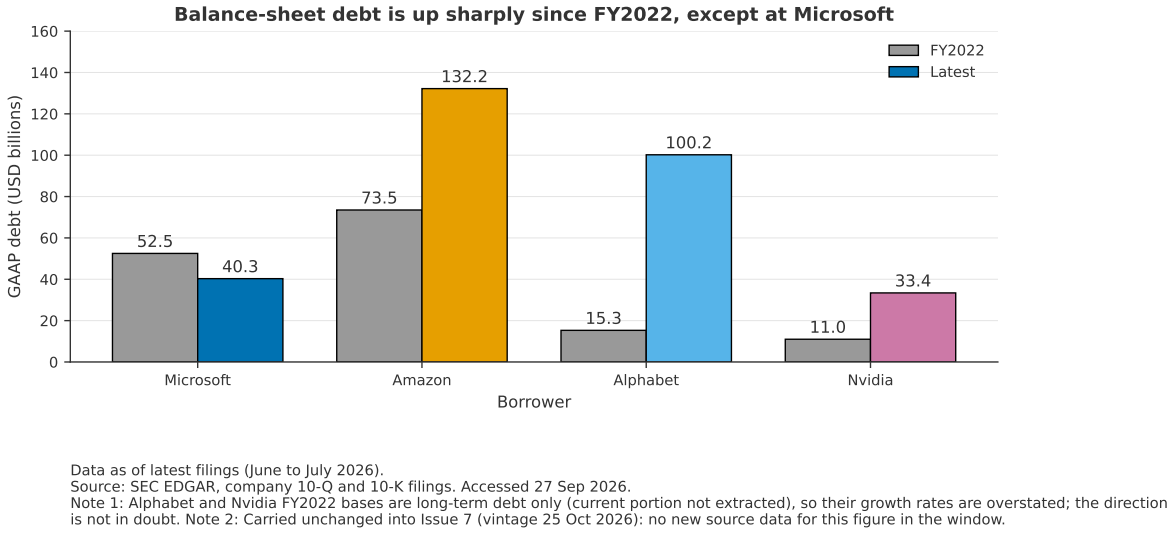

Figure 2: Disclosed fixed commitments run into the hundreds of billions per borrower. Refreshed for Issue 7: the two Meta bars are the Q3 2026 readings (Sep 30, 2026); all other bars carried, no new source data.

not at maturity. Meta's principal schedule is unchanged on the Q3 filing ($2,750 million due 2027, the balance concentrated after 2030), and the TeraWulf revolver generates no wall row because the 8-K does not state the facility's maturity. Figure 5 carries from Issue 6; the Nebius row sits in the pre-2031 modest-principal class the summary figure omits by design, and it is in the CSV.

5 Funding-stress gauges

All twelve gauge values carry from Issue 6 (Figure 6); the figure's footer states the basis. No gauge sits at historical stressed levels. Two gauges sit at warning, both structural to their banks and unchanged: Citi's maximum uninsured-deposit share of 82.5 percent (warn 70 percent) and State Street's minimum disclosed LCR of 107 percent (warn 110 percent).

One market reading was refreshed outside the figure. The US 10Y Treasury yield closed at 5.00% on Oct 23, down 9 basis points on the week (Treasury daily par curve via secondary mirrors; Observed A, press tier). The level remains at the top of the range the dashboard was built against (warn on the 90-day change at +100bp, level reference 5.18%), but the week's direction was down, not up, and the 90-day change gauge was not recomputed this issue because the FRED refresh route sits in the monthly pass, which runs with the first issue of November. Per checklist G, a calm funding dashboard is not read as an all-clear for buildout solvency: for the second consecutive week, the stress in this dataset is in borrower and SPV credit prices, which the gauges would catch only downstream.

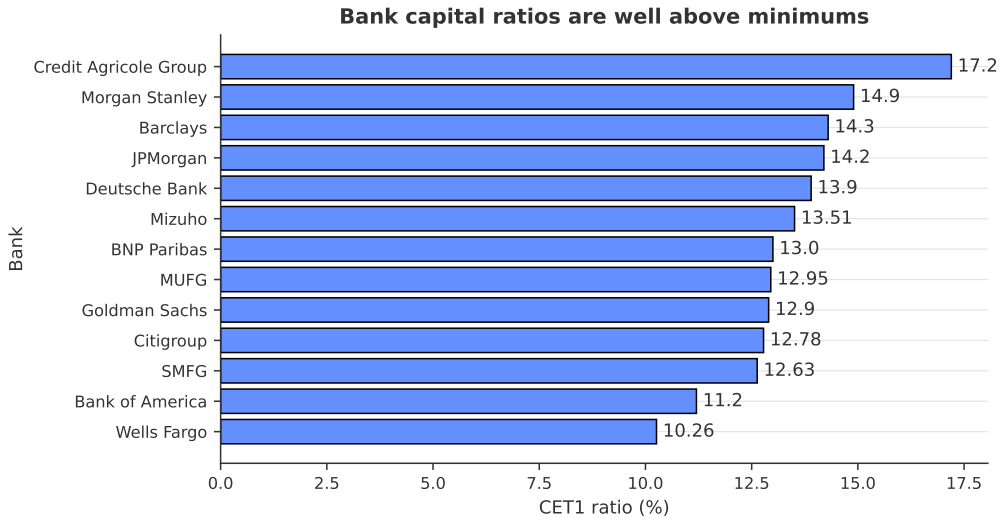

Data as of latest filings (June to July 2026).
Source: SEC EDGAR, company 10-Q and 10-K filings. Accessed 27 Sep 2026.
Note 1: Alphabet and Nvidia FY2022 bases are long-term debt only (current portion not extracted), so their growth rates are overstated; the direction is not in doubt. Note 2: Carried unchanged into Issue 7 (vintage 25 Oct 2026): no new source data for this figure in the window.

Figure 3: Balance-sheet debt is up sharply since FY2022, except at Microsoft. Carried unchanged from Issue 6.

6 The repricing, week two: senior notes cross their marks

Issue 6 recorded the Oct 16 repricing. This week extended it, and the extension matters more than the first move, because it reached a senior note. Across the Oct 19 to 23 sessions the collector fired seven Tier-1 alerts and a further run of TRACE flags (Figure 7). The Oct 19 alerts were reference-drop moves: CoreWeave 21873SAD0 at 79.6097, 10.71 points below its reference; the Applied Digital converts 038169AB4 and the IREN converts 46270CAB5 also fired, both equity-linked instruments trading far above par, and both flagged as such in the daily memos. The Oct 22 session produced the week's defining print: the CoreWeave 9.25% senior notes due 2030 (21873SAB4) crossed under the fund-mark leg at 85.05 and closed the session at a final print of 84.15625, more than 16 points below the Jun 30, 2026 fund mark of 100.6495. The same session flagged both CoreWeave converts again (21873SAH1 to a final 68.5222; 21873SAL2 to 77.5589), and Oct 23 flagged the IREN 1% notes due 2033 (46270CAJ8) at 66.2346. At the Oct 23 tape end, 25 registry entries print more than 15 points below their latest fund mark, 19 of them daily-watched; the count widened during the week, from 23 entries in the Oct 23 daily memo to 25 in the Oct 24 memo.

Three readings, in the checklist's order. First, the price signal is broadening within the capital structure: Issue 6's crossing was a convertible (21873SAH1); this week's is a senior note (21873SAB4), and the fund-mark census widened during the week to 25 entries by the Oct 23 tape. Second, the escalation marker from the checklist, SPV repricing spreading to public hyperscaler bonds, remains unconfirmed in its strong form: the week's prints are concentrated in neocloud and project paper, the Meta equity fall followed its own earnings and capex print, and no source reviewed reported sustained widening in non-tech investment-grade spreads. Third, no credit event was reported for any named credit in the window: no missed payment, acceleration, restructuring or project cancellation appears in the week's filings or memos. This remains repricing, not default, and the

Data as of June 2026 reporting periods.

Note 1: Only SMFG discloses a quantified AI-related exposure (JPY 4.0tn); all other banks disclose none. Note 2: Carried unchanged into Issue 7 (vintage 25 Oct 2026): no new source data for this figure in the window.

Figure 4: Bank capital ratios are well above minimums. Carried unchanged from Issue 6.

monitor's language stays at repricing.

The fund marks behind the crossing test deserve one sentence of care. They are N-PORT report-period values (Jun 30 and Jul 31, 2026), roughly three months old, because the 2026q4 bulk file has not been published. The crossing therefore measures the distance between October trade prices and summer fund marks; when the next quarter file lands, the marks leg of the watch will re-base, and some crossings will close mechanically. The reference-drop leg, which needs no fund mark, fired independently on the same names. Both legs are reported; neither is hidden inside the other.

7 Rotating focus: the commitment stock is the story

This issue's rotating focus is the shape of Meta's Q3 numbers, because they change what the monitor's headline aggregate means. Of the $188,369.0 million increase in primary committed credit this week, $184,469.0 million (97.9%) is one borrower's re-measurement of commitments it had already disclosed in smaller form (Reconstructed B). New signed borrowing in the window is $3.9 billion. A reader who watches only the aggregate would see the fastest growth week in the program's history; a reader who watches the composition sees something more precise: the buildout's obligation stock is compounding through contract signing, not through debt issuance, and the compounding rate at the largest signer is about 30% per quarter on both commitment portfolios.

That rate cannot persist arithmetically, and the filing itself shows the two governors. The first is

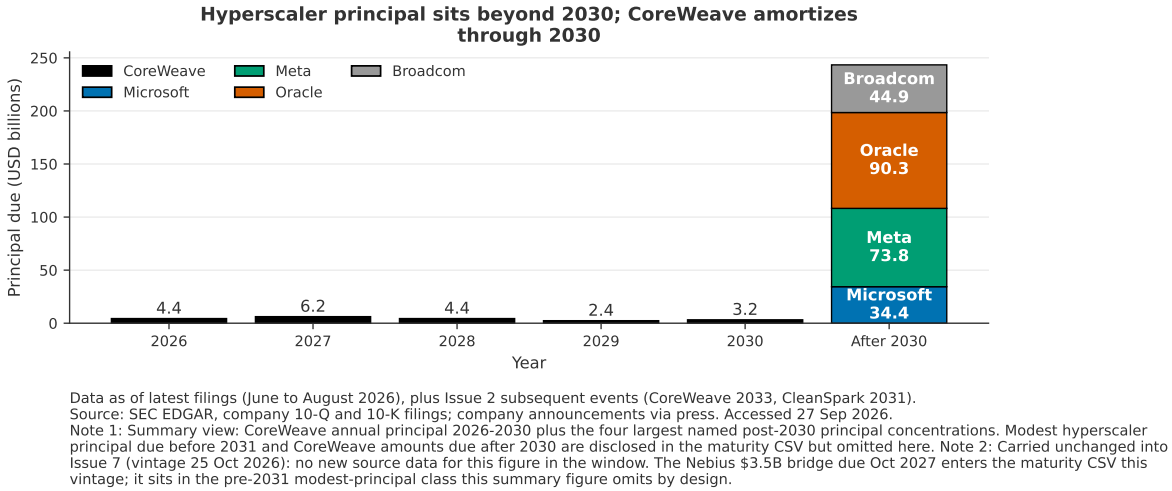

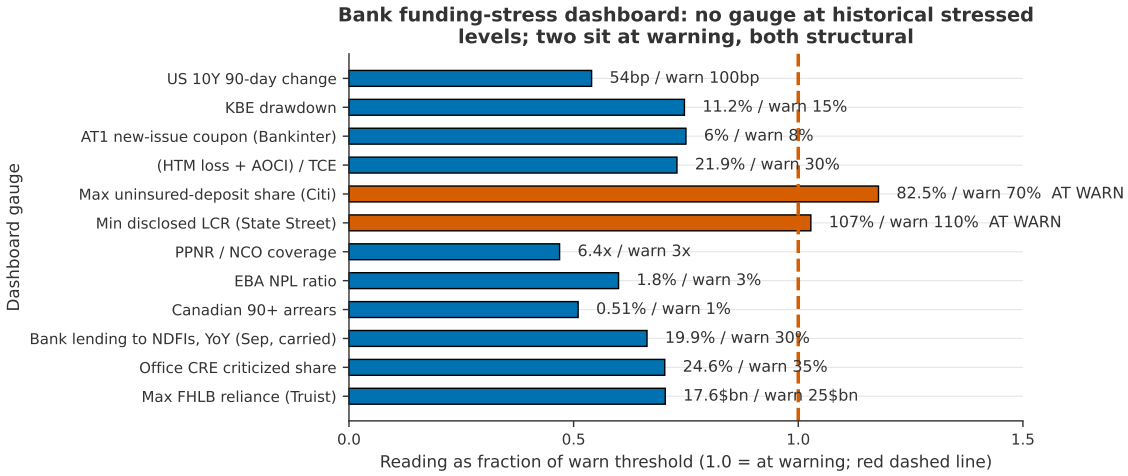

Figure 5: Hyperscaler principal sits beyond 2030; CoreWeave amortizes through 2030. Carried unchanged from Issue 6; the Nebius 2027 bridge row is in the CSV.

commencement: uncommenced leases convert into recognized liabilities and then into cash payments on 1 to 30 year terms starting through 2036, so each quarter's signing adds to a payment stream that stretches a decade out; the Q3 recognized lease stock grew only 8.8%, which means the conversion is back-loaded and the payment wall is still building. The second is the capex line: $34.91 billion spent in the quarter, guidance of $135 billion to $145 billion for the year, and an equity market that marked the stock down about 9% on the week of the report. The monitor's stranding framework (checklist C) asks whether revenue can service the fixed stock; Meta's filing does not answer that question, and the monitor does not answer it from a commitment table. What the table does settle is the direction of the fixed stock, its size relative to debt ($810.25 billion of commitment portfolios against $84.00 billion of notes principal), and the fact that none of it required a credit event, a covenant, or a lender's permission to grow by a third in ninety days.

Set the two smaller deals against that. Nebius must refinance or repay $3.5 billion by Oct 16, 2027, at a spread that rises 25 basis points a quarter until it does; its commitment is small, dated, and priced. Meta's $454.52 billion has no maturity date in the dataset because the filing gives the portfolios in aggregate. The monitor's maturity wall is therefore complete for the borrowers who borrow and structurally incomplete for the borrowers who sign. That asymmetry is a finding about disclosure, and it is recorded here rather than smoothed over: the wall in Section 4 is a floor, and the commitment portfolios in Figure 2 are the part of the structure the wall cannot yet schedule.

8 What we do not know

The monitor's unknowns are stated plainly. The Nebius bridge's drawn amount is not stated in the 6-K. The TeraWulf revolver's drawn amount and facility maturity are not stated in the 8-K; the amended agreement text is to be filed with the Q3 2026 10-Q. Meta's current-portion debt split at Sep 30, 2026 was not extracted, so the monitor's Meta debt aggregate carries on its Q2

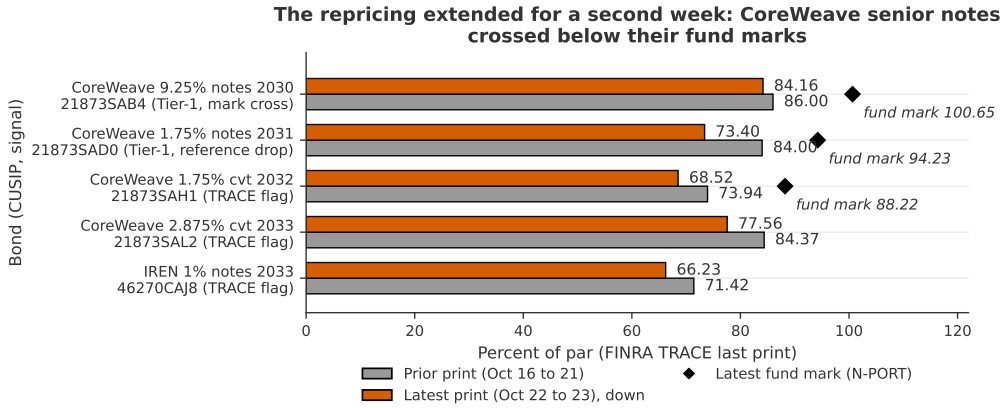

Data as of 25 Oct 2026: all twelve gauge values carried from Issue 6 (10Y and KBE at Oct 16 closes; AT1 benchmark carried, Banco BPM coupon still unverified; NDFI carried at Sep 2026; regulatory gauges carried at Q2 2026). The US 10Y level at the Oct 23 close was 5.00 percent (Treasury par curve via secondary mirrors), down 9bp on the week; the 90-day change gauge was not recomputed this issue because the FRED refresh route is part of the monthly pass.
Sources: FRED DGS10 via Eco3min mirror and US Treasury daily par curve (10Y); Finnhub (KBE); Bankinter press release (AT1 benchmark); Fed H.8 Oct 9, 2026 (NDFI); KR-WP-2026-12 (regulatory gauges).
Note 1: Ratios computed as value/warn (higher is worse) or warn/value (lower is worse); direct labels show the underlying numbers. The two gauges at warning are structural to their banks (Citi uninsured-deposit mix; State Street custody balance sheet), not new stress. Note 2: US 10Y closed 5.09% on Oct 16, down from 5.22% on Oct 8; the 90-day change slowed to +54bp. KBE closed 63.62 on Oct 16 (-11.2 percent from the Aug 14 close peak of 71.67). Note 3: Carried unchanged into Issue 7 (vintage 25 Oct 2026): no new source data for this figure in the window.

Figure 6: Bank funding-stress dashboard: all twelve values carried from Issue 6 (10Y and KBE at Oct 16 closes; AT1 benchmark, NDFI and eight quarterly gauges carried). The 10Y level at the Oct 23 close, 5.00 percent, is reported in the text. No gauge at historical stressed levels; two sit at warning, both structural.

basis. The Yucca loan's current status remains unknown: the stated maturity passed on Sep 18, 2026, the position was repeated at unchanged principal on Oct 21, and no repayment, extension or default record has been found. Bank Q3 regulatory detail (HTM and AOCI, deposit mix, LCR, NDFI lending) had not been processed into the dashboard basis as of this run; the quarterly gauges carry at Q2 for a second consecutive issue. The Anthropic public S-1 has still not been filed; every Anthropic figure remains press-reported. The Broadcom $60 billion package has no announced pricing or closing date; the $18 billion junior tranche has not launched. The Broadcom OpenAI package above $50 billion, the Oracle chip SPV, and the SpaceX $40 billion package are at talks stage with no terms. The Amazon $8 billion SPV is at discussions stage. TeraWulf's $3 billion package has not launched (no FWP, 424B, or 8-K in EDGAR); expected November. The Banco BPM EUR 400 million AT1 coupon remains unverified, so the AT1 benchmark is carried. The Volta loan's maturity, covenants and draw status remain undisclosed (press tier only). These are blanks, not zeros, and they stay out of the aggregates until verified.

9 Federal land pipeline (BLM)

Watchlist annex. The Bureau of Land Management case ledger for data-center-related applications on federal land, discovered from BLM MLRS records alone (ledger as of 2026-10-25). These are

Data as of 23 Oct 2026 (FINRA TRACE prints; Grade A). Fund marks are SEC N-PORT report periods 30 Jun and 31 Jul 2026.
Sources: monitor TRACE store (trace_trades.duckdb); daily filings pull memos, 20 to 24 Oct 2026.
Note 1: Prices are percent of par. Latest prints are session-final prints: 21873SAB4, 21873SAH1 and 21873SAL2 on 22 Oct; 21873SAD0 and 46270CAJ8 on 23 Oct. Note 2: The two CoreWeave convertibles and the IREN note are equity-linked instruments; their moves partly track the underlying shares. The 21873SAB4 crossing is on a senior note.

Figure 7: The October 19 to 23 repricing: prior print against latest print for the five senior and convertible CUSIPs that produced Tier-1 alerts or TRACE flags in the window, with latest fund marks where the N-PORT panel carries them.

land positions before any financing exists: no applicant in this annex has a bond in the registry, an EDGAR registrant record, or any obligation in the master table, and this annex carries no obligation entries and no dollar figures. The ledger holds 41 cases: 22 campus, 14 infrastructure, 5 unclassifiable; 35 are active (Pending, Authorized or Interim).

Acreage caveat: BLM's recorded acreage field is unreliable for pending cases. Recorded acreage sums to 15,832.95 acres over the active cases and 30,175.12 acres over all dispositions, but 8 active cases record 0.0 acres, including Project Beehive (Utah), described in its application at over 9,000 acres. Recorded figures are printed as filed.

10 Methodology and data

The monitor is an append-only weekly dataset. Each vintage carries forward all prior rows unchanged, stamped with their original `as_of` dates, and adds new rows for new observations. Corrections and status updates are new rows with `supersedes` pointers, never edits. The primary committed aggregate sums primary rows that have not been superseded. The vintage CSVs (entities, sources, obligations, obligation sources, borrower metrics, lender metrics, maturity wall) plus a synthesis note are archived under `data/vintages/2026-10-25/`.

Every statistic carries an evidence grade. Observed A is a number read directly from a primary document or a company announcement. Reconstructed B is a researcher calculation from Observed A inputs, such as the primary committed total. Estimated C is a modeled number with stated assumptions. Assumed C is a placeholder the program tracks explicitly rather than hiding. Company claims and researcher calculations are kept separate in the text. Six new sources entered this vintage: four filed (Meta 10-Q, Nebius 6-K, TeraWulf 8-K, and the BDC exchange prospectus repeating the Yucca position), one filed N-PORT set (three funds' holdings reports), and one regulatory (the monitor's TRACE store for Oct 19 to 23).

Table note: Dedup keys verified unique (superseded rows skipped); no collisions. Three supersedes rows were added this vintage (OBL-0121 to OBL-0123, superseding OBL-0018 to OBL-0020).

What changed methodologically this issue: two things, both stated rather than silent. First, the Meta Q3 re-measurement is recorded at obligation level only. The daily extraction of the 10-Q recorded long-term debt carrying value ($80,922 million) and the unchanged notes principal schedule ($84,000 million), but not the current-portion split; superseding the Q2 debt aggregate row (OBL-0017, $83,664 million carrying basis) with a long-term-only figure would have manufactured a debt decline that the filing does not show, so OBL-0017 carries and no Meta borrower-metric row

is added until the split is extracted. Second, the bank funding-stress dashboard carries all twelve values for a second issue: the Q3 10-Q processing anticipated in Issue 6 did not land in this run's window, and the gauges are labeled carried in the figure footer rather than silently aged. The full debt-hunting checklist remains in permanent effect.

Table 1: Delta table: Issue 6 (vintage 2026-10-18) to Issue 7 (vintage 2026-10-25).

Item	Issue 6	Issue 7	Change
Primary obligations (current)	72	74	+2 net (+5 new, 3 superseded)
Primary committed ($M)	4,320,436.0	4,508,805.0	+188,369.0 (+4.36%)
In-window signed credit	$5,000M (Volta, press tier)	$3,900M (filed)	Nebius bridge $3.5B; TeraWulf revolver $400M
Registry delta	Yucca loan found	N-PORT holdings; Yucca corroborated	No KR-WP-2026-27 figure changes
Memo obligations	47	47	No change
Sources	93	99	+6 (4 filed, 1 N-PORT set, 1 regulatory)
Entities	88	88	No change
Borrower metrics	33 rows	33 rows	Carried (Meta Q3 at obligation level; see Section 10)
Lender metrics	13 rows	13 rows	No change
Maturity wall	77 rows	78 rows	+1 (Nebius bridge, 2027)
New figure	fig_repricing (Oct 16)	fig_repricing (Oct 19 to 23); fig_commitments refreshed	Meta bars at Q3
Funding-stress gauges	2 refreshed, 10 carried	0 refreshed, 12 carried	10Y level read separately (Section 5)
Issuer identity pass	Cap 8: Yucca closed not_found	2 worked: linkage completed	Registry coverage 107 of 107 issuer strings
Correction log input	None open	None open	No open flags

Table 2: Dataset inventory, vintage 2026-10-25.

File	Rows	Change vs Issue 6
Entities	88	0
Sources	99	+6 (4 filed, 1 N-PORT set, 1 regulatory)
Obligations	125	+5 (2 new primary, 3 superseding)
Obligation sources	126	+5
Borrower metrics	33	0
Lender metrics	13	0
Maturity wall	78	+1
